

Deloitte and EMC eDiscovery Alliance

Manage preservation and data collection in-house to maintain control, reduce cost, and mitigate risk

Solution overview

Many organizations need to find and manage content for litigation, compliance, and internal or regulatory investigations. Responding in a quick and cost-effective manner is directly related to how effectively an organization is managing its information. Today, most business communications and activities are electronic and the volume of Electronically Stored Information (ESI) is growing exponentially. This information exists across a wide and ever-expanding variety of disparate systems and locations across the enterprise. Many of these sources are unmanaged, unorganized and continually changing with limited search functionality. As a result, the identification, collection, preservation, and policy management of ESI can be an extremely time-consuming and costly endeavor.

Deloitte and EMC help organizations to effectively manage information in-house, according to business value and risk and to respond rapidly to discovery requirements—while also managing the costs of identifying, collecting, preserving, processing, and reviewing information.

Meeting the eDiscovery challenge with Deloitte and EMC

Leveraging Deloitte services and EMC technology provides ongoing value by bringing initial eDiscovery in-house. Deloitte and EMC utilize EMC® SourceOne® eDiscovery — Kazeon, a quick-to-deploy, appliance-based product that automates the in-house identification, collection, preservation, processing, analysis, first-pass review, and export of content that resides in live and archive data sources.

The combination of Deloitte and EMC

- Provides eDiscovery technology and a full range of eDiscovery services
- Enables an organization to bring initial eDiscovery identification and collection in-house to quickly, accurately, and cost-effectively respond to discovery requests.
- Provides access to an experienced service provider for the planning and execution of litigation response plans
- Automates critical and costly pieces of an organization's litigation response protocol
- Gives you the ability to export data for processing, hosting, and review at Deloitte's world class Electronic Discovery Solutions Center ("EDSC")

As a result, the following benefits may also be realized:

- Enables organizations to apply and enforce retention policies in accordance with government, industry, or corporate mandates and respond to critical litigation pressures.
- Assists with defensible disposition of information deemed not to have business or legal value.
- May increase organizational efficiency and improves worker productivity by enabling the reuse and sharing of information both within the organization and with external partners and suppliers via a unified repository.

This innovative solution consists of feature-rich technology (EMC SourceOne eDiscovery – Kazeon for managing discovery-related content, along with transparent indexing and collection) and professional services from Deloitte’s practitioners.

A unique, tightly integrated, scalable, and truly end-to-end solution

Deloitte professionals bring extensive industry knowledge and leading practices to the creation of strategies, policies, procedures, and protocols to meet the eDiscovery needs of large enterprise organizations. Deloitte practitioners are trained on and experienced with the implementation of EMC SourceOne eDiscovery – Kazeon to manage the process of data identification, classification and federated search for proactive litigation preparedness. Additionally, the team can work with and train organizations to perform early case assessments and to leverage EMC SourceOne eDiscovery – Kazeon along with our proven accelerators and methodologies to automate the creation of ESI topography maps.

EMC SourceOne eDiscovery – Kazeon also provides an option to export data for further processing and review to support specific litigation or investigations, which can be achieved through the use of Deloitte’s Electronic Discovery Solution Center (“EDSC”). The EDSC can host data in a variety of linear review tools as well as use

concept, social networking, and timeline analysis tools for early case analysis.

Accurate, efficient, and cost-effective

Deloitte and EMC can help legal, IT and records management teams realize benefits such as:

- **Leverage in-house collection** processing, and analytical culling for downstream cost reduction
- **Conduct early case assessment** with extensive searching, analytics, and first-pass review
- **Enforce defensible litigation hold** and eDiscovery workflows with complete chain of custody
- **Integrated, automated and centralized collection** from various file systems, e-mail systems, and content management systems
- **Apply sophisticated analytics** to identify privileged, relevant, and non-relevant data
- **Optimize search and analytics** with advanced, dynamic concept search
- **Transparent and non-disruptive search and collection** efforts of data with minimal disruption to workers, corporate systems, or production environments
- **Enhanced security/control** to collect and preserve potentially responsive content into a secure repository for legal hold
