CGT Vantage™

Orchestrate cell and gene Therapy Patient Treatment Journeys

ConvergeHEALTH™

CGT Vantage™

Orchestrate cell and gene therapy patient treatment journeys

ConvergeHEALTH™

A software-as-a-service solution designed to orchestrate the end-to-end patient treatment journey for cell and gene therapies.

What is it?

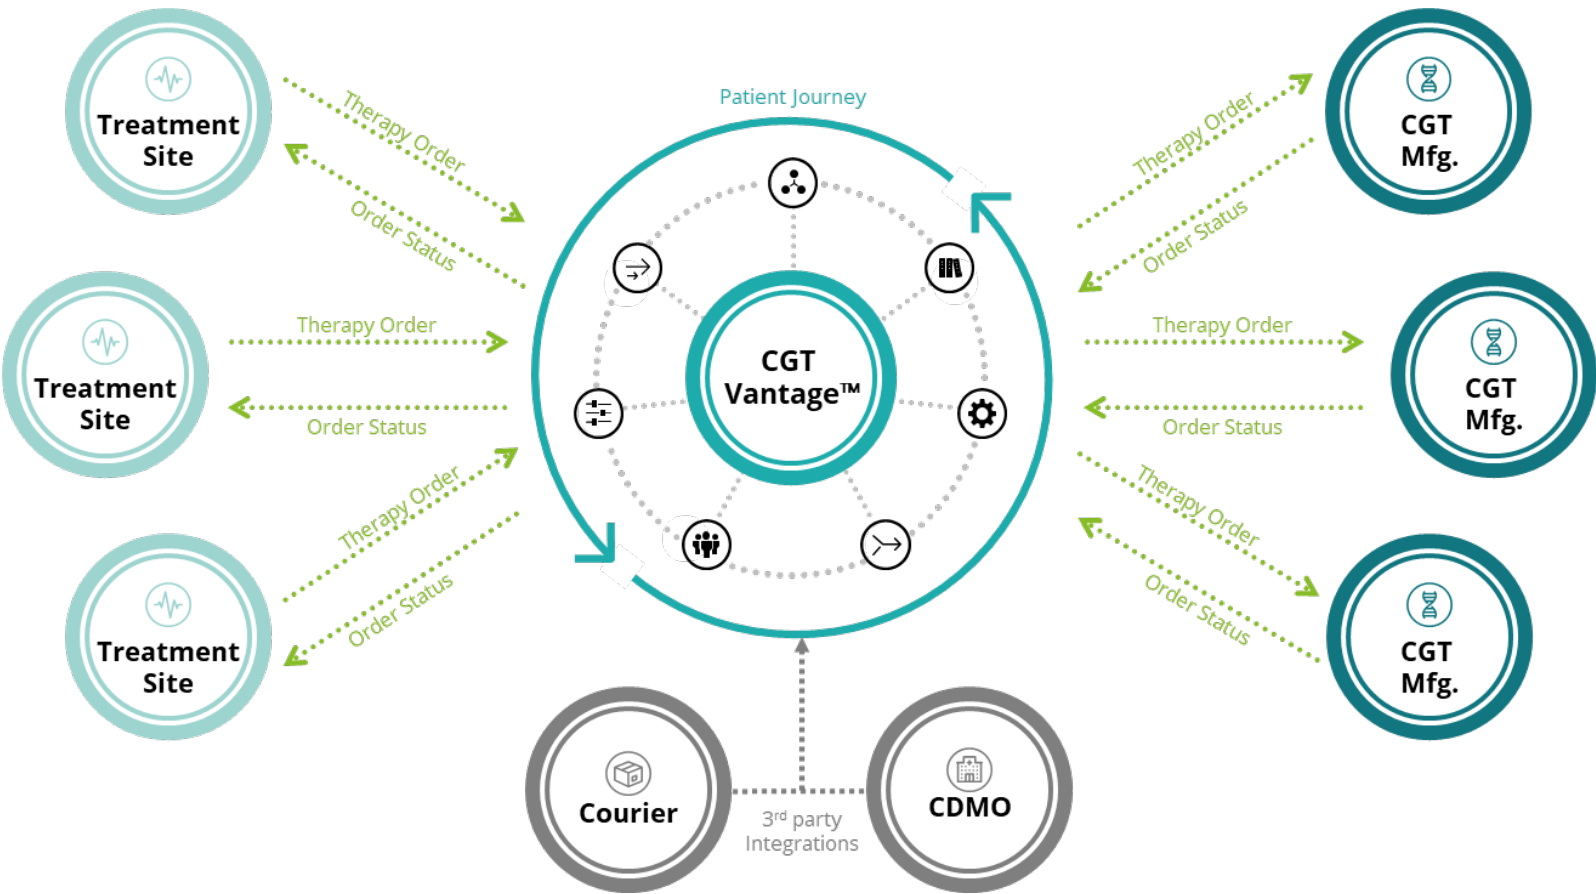

Cell and Gene Therapies (CGTs) have emerged as one of the fastest growing sectors within the Life Sciences industry. The CGT supply chain is more complex than traditional pharma, – requiring more stakeholders and touchpoints. Organizations can simplify and orchestrate this end-to-end journey using CGT Vantage.

What does it enable?

- **CGT manufacturers** to configure workflows for clinical trials and commercial therapies, manage manufacturing schedules, and provide real-time updates to therapy orders.
- **Health Care Providers** to refer, enroll, schedule, and order therapies for their patients across manufacturers and therapies; monitor and orchestrate patient journeys with COI and COC tracking through drug product infusion.
- **Ecosystem partners** to engage and seamlessly integrate to provide insights on the value-added services offered by them as part of the patient treatment journey

Realize the potential benefits of CGT Vantage:

Provider	Manufacturer	Ecosystem Partners
Provides access to a single, standardized portal to schedule patient treatments regardless of therapy or manufacturer.	Allows manufacturers to launch multiple therapies quickly, ensure operational transparency, and reduce time to market while providing complete tracking of COI and COC across the patient treatment journey.	Provides standardized API's for integrations into external systems to streamline the data exchange and provide operational transparency across the patient treatment journey.

What this means for organizations:

Secure, scalable, cloud based

Hosted on AWS Cloud, this Software-as-a-Service solution is fully managed and operated by Deloitte, with multi-tenant capabilities that are GxP- and HIPAA-compliant

Standardized, configurable portal

From subject referral, to enrollment, and order management, the standardized user interface for providers serves as a foundation for all CGT business process workflows while being configurable by the manufacturer at a therapy level.

Standardized integrations

Data exchanges to and from manufacturers and other ecosystem partners are handled using industry leading API patterns.

COI & COC management

A standardized process for generation of Chain of Identity (COI), barcoding, and labels, including tracking of Chain of Custody (COC) with all stake holders and easy COC report generation.

Flexible model

As a modularized product, the platform enables manufacturers to subscribe to specific modules that best support their business processes.

Flexible journey milestones

Provide flexible workflows for different types of variations in the patient journey. Manufacturers can then set up milestones as individual touchpoints on the patient treatment journey.
