Global Reach, Local Solutions

Who We Are

For more than 30 years, we have partnered with development agencies, philanthropies, social enterprises, and businesses to drive large-scale societal, economic, and human impact in more than 140 low- and middle-income countries. We blend commercial capabilities and knowledge from across our firm with solutions tailored to the international development context. Our global network of 360,000 professionals brings innovation, digital tools and assets, consulting methods, and private and social sector financing to maximize the impact, integrity, and sustainability of development programs. In addition to our technical areas of focus—including energy, economic growth, water and sanitation, and global health—we enhance international organizations' capabilities and delivery effectiveness by supporting their strategic, digital, human resource, and organizational management transformation.

Who We Work With

We deploy our global network and local expertise to build long-lasting partnerships with multilateral organizations, bilateral development organizations, international financial institutions, philanthropies, social enterprises, and businesses. With collaboration and creativity, we provide critical programmatic and operational support to these development agencies so that they are better positioned to deliver on their global mission to promote innovation and sustainability.

Inter-American Development Bank

Organisation for Economic Cooperation and Development

US Export-Import Bank

Millennium Challenge Corporation

United Nations

Our Priority Sectors

We implement development programs in multiple technical sectors, including energy, economic growth, global health, and water and sanitation. We apply our programmatic experience to develop tailored approaches that empower local populations and make communities more resilient.

Energy

We tailor global best practices to local contexts so that we can solve pressing energy and climate change challenges. By mobilizing investment and tackling obstacles and limitations in the energy sector, we promote resiliency and create diverse, robust power markets.

Economic Growth

Partnering with governments and local organizations, we strengthen economic institutions, enable trade and investment, and support policies that drive broad-based growth. Our work in public finance, private sector development, and governance builds markets that are inclusive and resilient.

Global Health

Fostering partnerships and applying cutting-edge technologies, we build resilient health systems that improve access to equitable, affordable, and high-quality health services. Our global health expertise includes policy and regulation, innovative financing, supply chain, organizational development, and using data for decision-making.

Water and Sanitation

We support national and local governments as they structure stable policy and regulatory environments that encourage water sector investment and protect consumer access. Pulling from our decades of experience strengthening water sectors, we strengthen local utilities and create sustainable supply chains.

Multi-Disciplinary Priorities and Operational Support

We prioritize a range of cross-cutting issues to help global and local partners create lasting change. To overcome these complex challenges, we design creative solutions that are innovative, inclusive, and sustainable.

Climate and Resilience

To address the critical impacts of climate change, we work with leaders to strengthen national adaptive capacity and craft bold strategies that deliver critical services to vulnerable communities.

Gender Equity and Social Inclusion

We develop interventions and strategies to empower marginalized groups and cultivate inclusive societies using gender equity and social inclusion as a lens.

Private Sector Engagement

Recognizing that private sector investment and innovation foster sustainable growth, we encourage businesses to build relationships with public sector actors and create systems that are inclusive, efficient, and resilient.

Monitoring, Evaluation, and Learning

Our team of evaluators collaborates with local partners to gather and analyze data to guide strategic planning, applying innovative data analytics and data science solutions in our assessments.

Digital for Development

To bridge the digital divide in low- and middle-income countries, we help our local partners imagine, build, and run digitally enabled solutions that advance development priorities, applying technologies such as the Internet of Things, blockchain, and artificial intelligence and machine learning to a range of sectors, including economic growth, health, and service delivery.

Our Operational Support to Institutions

International donor organizations use complex systems and processes to drive impact. In addition to implementing development programs in partner countries, we also work directly with our clients to provide a range of services so that development agencies can meet future challenges.

Supply Chain

We assess risk in the client context by drawing critical insights from disparate data, and our Control Towers illuminate supply chain activities in real-time, enhancing business processes and improving organizational value.

Digital Transformation

We drive digital change in development organizations to respond to emerging challenges of the 21st century and fundamentally redefine the donor-beneficiary relationship by prioritizing digital strategy, stakeholder experience, data and cyber, talent and culture, innovation, and governance.

Data and Analytics

We help development organizations shape strategy, manage data, deliver information, and amplify intelligence that empowers them to make decisions.

Emerging Technologies

We work with our clients to imagine, build, and operate digitally enabled solutions for development using our expertise with innovative technologies including the Internet of Things, blockchain, and GIS.

Internal Controls

We assist our clients to keep pace with growth, regulations, and cultural shifts using controls and processes to anticipate and mitigate risk, including internal audit functions, IT assurance, controllership, accounting and reporting requirements, digital controls, and treasury management functions.

Forensics

We help our clients to predict, detect, and respond to global crises, controversies, and transactions. We use specialized forensic skills, investigative toolsets, and analytics to design solutions in anti-money laundering, fraud detection, business intelligence gathering, and forensic investigations.

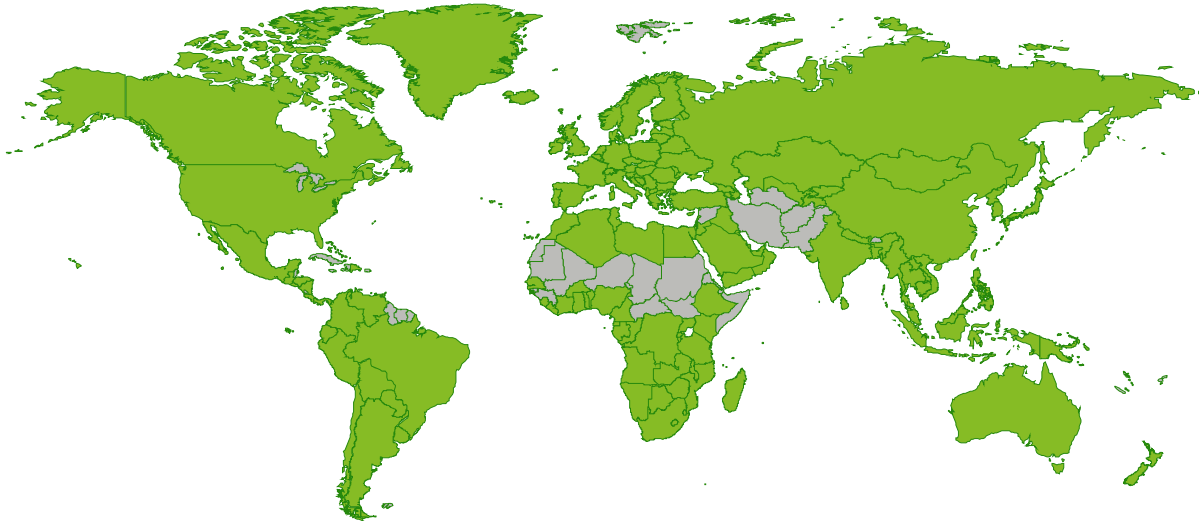

Human Capital and Learning

To improve how organizations perform and learn, we provide talent management and development services in HR strategy, processes and operations, technology, and sourcing.

Cybersecurity

We support organizations to plan and execute integrated cyber strategies that maximize performance and build skills while prioritizing security and privacy.
