

How we can be of assistance

Data is the engine of any innovative company. The use of data is a topic that is high on the agenda of many organizations and policy makers. Data comes with endless possibilities: it provides new insights, processes become more transparent and it can be used as currency. In return, however using data comes with risks. Data can fall into wrong hands, data can pollute and it can cause a power imbalance. European and Dutch legislators recognize the opportunities and risks of data and introduced laws and regulations to regulate the use of data, in both sector-specific laws and regulations but also in a number of overarching laws and regulations.

Deloitte Legal offers various services in the areas of data valorization and data compliance to help you harness the potential of data and mitigate data risks. To solve complex data issues, we bring: years of experience, a multidisciplinary approach, international perspective and knowledge about specific sectors. Our Data Advisory Desk helps you gain insight in the legal framework and anticipate and respond to hazards such as data breaches, so that high fines can be avoided.

Client challenges

*"May I **scrape data** from websites, including government websites?"*

*"Do I need to **obtain consent** to process personal data and how should I set that up?"*

*"The qualification as a controller, joint controller or processor is a returning topic of discussion and **we would like to receive clear advice on this matter.**"*

*"What **data protection rules** must I comply with if I process data XYZ?"*

Our services

Ad hoc advice

Deloitte Legal can help you with a variety of data-related legal issues. We approach your question from different angles: applicable laws and regulations, contractual agreements and intellectual property law. Our unparalleled global presence enables us to support you with regulatory and contractual compliance related to (cross-border) data processing activities.

Data protection

Our data protection services help clients protect their personal and non-personal data. Clients can for example protect data through database rights, trade secrets and contractual agreements.

Data compliance

With a continuous stream of new data laws and regulations, the legal framework is becoming increasingly complex. We recommend a holistic approach when implementing (new) data laws and regulations, such as the General Data Protection Regulation, the Artificial Intelligence Act, the Data Act and local data laws and regulations. We offer multiple data compliance services, such as drafting and reviewing data processing agreements, drafting and reviewing privacy documents, executing privacy gap assessments, executing data protection impact assessments, executing data transfer impact assessments, etc.
