

K2 PURE SOLUTIONS ACCELERATES GROWTH

# Simplifying and standardizing core business processes through a cloud-based ERP transformation

*“This transformation was about more than replacing a legacy system, it was about simplifying how we operate and prepare the business for the future. Deloitte’s leadership and SAP Public Cloud expertise allowed us to move quickly while building a scalable, compliant ERP foundation.”*

—Howard Brodie, CEO, K2 Pure Solutions

## THE ISSUE

For K2 Pure Solutions, growth and operational complexity were increasingly constrained by a legacy SAP ECC environment that could no longer keep pace with the organization’s evolving business needs. As the company expanded its manufacturing operations and navigated heightened regulatory and compliance requirements, limitations in scalability, real-time insight, and process automation became more pronounced.

Core functions across Finance, Procurement, Asset Management, Inventory, and Manufacturing were hindered by manual processes, fragmented data, and limited system flexibility. Enhancing or adapting processes required significant effort, increasing operational risk and slowing decision-making at a time when agility was important.

Recognizing that incremental improvements would not help address these challenges, K2 determined that a modern, cloud-based ERP platform was required — one that could simplify operations, improve visibility, and provide a future-ready foundation to support growth, compliance, and continuous innovation.

## THE SOLUTION

To support K2 Pure Solutions’ growth objectives and address the limitations of its legacy ERP environment, K2 collaborated with Deloitte to deliver a broad ERP transformation anchored on **GROW with SAP S/4HANA Cloud Public Edition**. Rather than pursuing a traditional system upgrade, the program focused on implementing a modern, cloud-based platform designed to simplify operations, improve visibility, and help enable continuous innovation.

Deloitte led the end-to-end transformation using **SAP Activate for Public Cloud**, combining readiness assessments, fit-to-standard design, and disciplined delivery to accelerate value realization while minimizing disruption. The solution standardized and streamlined core business processes across **Finance, Controlling, Procurement, Asset Management, Inventory, and Manufacturing** — reducing manual effort and to help enable-real-time insight through embedded analytics and SAP Fiori user experiences.

As part of the overall program, Deloitte also supported K2 through the **SAP software resale process**, simplifying commercial contracting and helping to ensure alignment to the GROW with SAP commercial model. In parallel, Deloitte delivered integrated **change management and capability-building** activities to support user adoption and equip K2’s teams to confidently operate in the new environment.

Following go-live, Deloitte continues to support K2 through **Application Management Services (AMS)**, providing ongoing operational support, optimization, and continuous improvement. This end-to-end approach — from implementation through operate — has delivered a scalable, compliant, and future-ready ERP foundation to support K2’s continued growth and regulatory needs.

Key SAP solutions ———— SAP S/4HANA Cloud Public Edition ———— SAP Business Technology Platform (BTP)

## THE IMPACT

Scalable cloud ERP foundation to support growth and regulatory change

Real-time visibility enabled through embedded analytics and SAP Fiori

Standardized core processes across Finance, Procurement, and Manufacturing

Stronger compliance and risk management through standardized workflows

Reduced manual effort and improved operational efficiency

Faster adoption and value realization through integrated change management
