Dimensions of Cybersecurity within AI and GenAI

Cybersecurity considerations with regards to Artificial Intelligence (AI) and Generative AI (GenAI) have to be viewed from three different angles: Securing AI and GenAI Systems, using AI and GenAI for improving Cybersecurity, and using AI and GenAI for malicious actions.

Cybersecurity For Al and GenAl

Protecting AI and GenAI systems from Cybersecurity threats, by providing guidance to secure implemented or planned AI and GenAI use-cases.

Focus of the following

Cybersecurity With Al and GenAl

Improving Cybersecurity capabilities and boosting Cybersecurity processes by including AI and GenAI.

Cybersecurity From Al and GenAl

Changing Cybersecurity threat landscape due to launch of more sophisticated and new kinds of cyberattacks.

Use Case Ideation & Development

Al and GenAl Training & Labs

"Futurecasting" Al and GenAl Tabletop Exercises

Al Threat Intel & Attack Surface Management

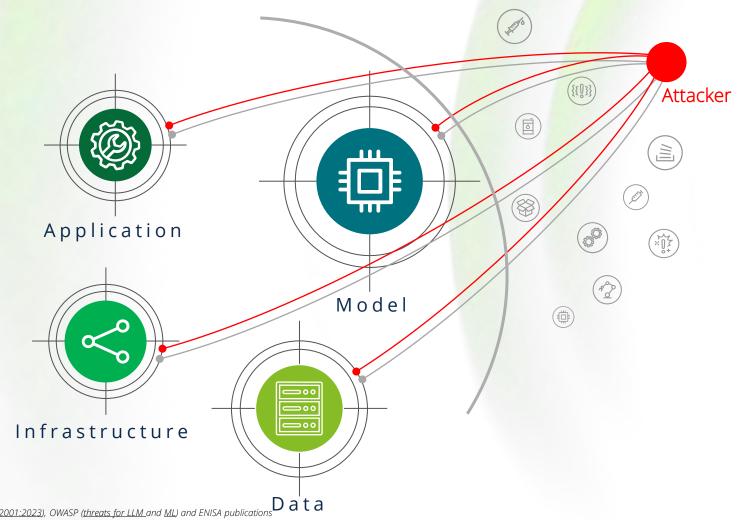

Al and GenAl induced change in Cybersecurity threat landscape*

The rise of AI and GenAI not only comes with new opportunities but also with a change in security-related threats that will continue to evolve, making it imperative to secure AI systems.

Cybersecurity Threat Landscape

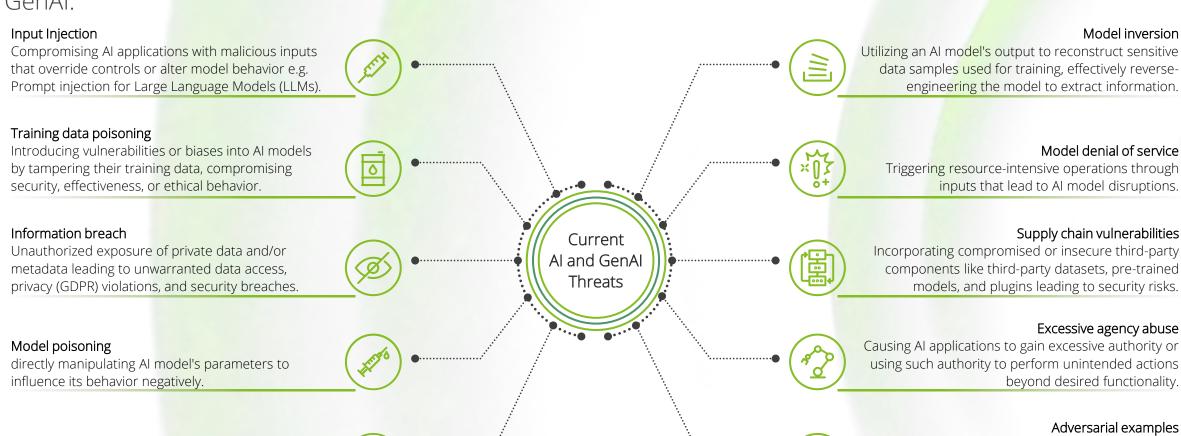

The increasing usage and availability of AI and GenAI leads to a change in the Cybersecurity threat landscape. On the one hand it enables attacker to intensify their attack frequency, efficiency and complexity due to the use of AI and GenAI, on the other hand it is leading to completely new threats for AI and GenAI like adversarial attacks.

Moreover, the attack surface presented by Al and GenAl solutions is unfamiliar territory for many. It's not only the infrastructure, data and application that require safeguarding, but also the underlying model on which any Al and GenAl System is build. It contains many sensitive information and requires additional protection. Additionally, the increasing amount of data being processed and stored is leading to an increasing focus of data security.

Al and GenAl is expanding the Cybersecurity threat landscape*

Based on the publications of OWASP, ISO and ENISA, Deloitte consolidated the Top 10 threats for Al and GenAl.

Model stealing

Unauthorized access, copying, or exfiltration of an Al model.

) in

Utilizing adversarial learning to create malicious inputs, which deceive AI models during the inference phase, e.g. by causing a misclassification.

Cybersecurity for AI and GenAI Framework*

Overarching & Al and GenAl domain specific security capabilities ensure the secure development, implementation, and usage of Al and GenAl solutions.

Al and GenAl Domains

The domains constitute the core structure of Al and GenAl systems and are used to cluster security capabilities

The Data Domain includes all data handled by the model during training, testing, validation, and for inference after deployment.

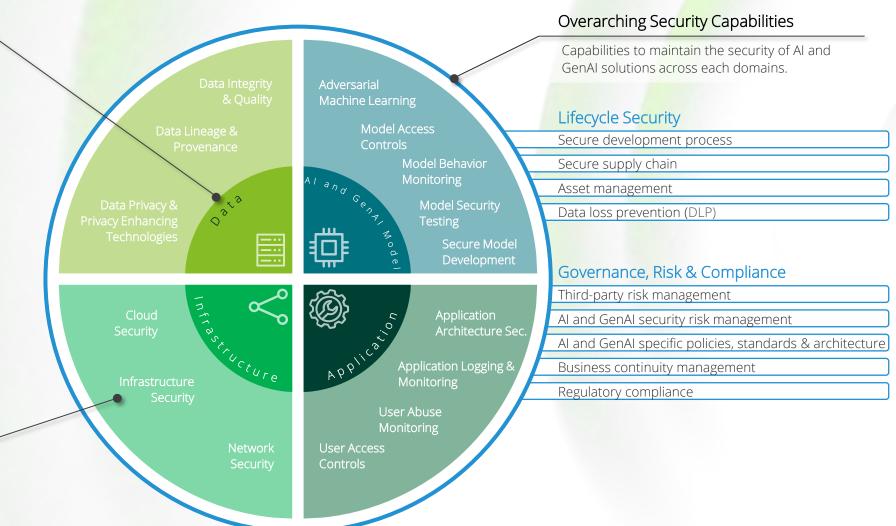

The Al and GenAl Model Domain involves the model architecture, training, testing and validation processes, in addition to the model's unique parameters.

The Application Domain is the external layer of the AI and GenAI system that hosts the model and sits on the infrastructure. It serves as the user interface.

The Infrastructure Domain encompasses the underlying hardware and networking components that are used for developing and hosting the AI and GenAI system.

Al and GenAl Security Capabilities

A Security Capability is a category for grouping of controls that are designed to help address specific Cybersecurity threats in each domain.

Al and GenAl Cybersecurity roadmap – discover your next steps

The AI and GenAI Cybersecurity Roadmap is designed to help organizations on the journey toward secure implementation, deployment, and usage of AI and GenAI applications.

Hold a Al and GenAl Cybersecurity lab

Understand the basics: delve into foundational concepts of Cybersecurity for AI and GenAI including threat landscape, encryption, network security, and access controls with AI labs and future casting tabletop exercises (TTX)

Familiarize yourself with Al and GenAl: gain a basic understanding of Al and GenAl principles and its implementation, algorithms, and its applications in Cybersecurity.

Assess your Al risk level (AIRL)

Measure your maturity/risk level: to gauge your organization's readiness and maturity, we have Framework devised a broad assessment and security. Deloitte's solution can help you define the AIRL-of each component you are hoping to secure scoring it on a 1 to 5 scale. Your components' AIRL will inform the specific controls families to be considered and prioritized.

Identify tailored Security controls

Identify the tailored set of Cybersecurity controls. Deloitte's Cybersecurity for Al and GenAl Framework has over 500 controls from legislation, industry standards, and existing frameworks mapped to four domains to meet the needs of your AIRL.

Engage in continuous monitoring

Actively monitor your Al and GenAl systems.

Though implementing tailored security controls is crucial to harden your Al and GenAl systems against threats, the ever-evolving threat landscape and new legislation/regulations are pushing organizations to continuously monitor their environments to stay abreast of attacks. To bolster your confidence in the security of your Al systems, Deloitte's attack surface monitoring (ASM) and threat intel, and Al red teaming services are next steps to help you bolster the Cybersecurity for and from Al systems and threat actors.

Implement tailored Security controls

Begin with individual quick wins: Deloitte's approach begins with implementing individual quick wins derived from our maturity assessment to focus on near-term security enhancements. These quick wins are actionable steps that are designed to help you yield significant improvements in your security posture.

Cybersecurity for AI and GenAI Framework legend

The Deloitte Cybersecurity for AI and GenAI Framework synthesizes best practices from ISO standards, MITRE ATT&CK, OWASP and ENISA to secure your AI and GenAI system to combat known and novel threats.

External drivers

Cybersecurity for Al and GenAl Framework structure

Threats

As a special type of software, there are new and traditional Cybersecurity threats to Al and GenAl systems.

Regulations

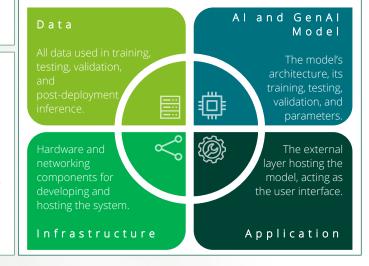

We have conducted geographyspecific research to comply with regulations and follow standards.

This is a major focal point of this Framework and is being continuously updated to keep up with this evolving space.

System domains

Al and GenAl threats identified can be exploited in different stages of the Al and GenAl lifecycle.

Building appropriate mitigation mechanisms against the new and traditional vulnerabilities, the Al and GenAl system is organized in four different domains.

Domain-specific capabilities

For each domain, there are different capabilities which group security controls to address all the potential attack vectors and threats for Al and GenAl

Overarching capabilities

As Al and GenAl is a software at its core, overarching capabilities ensures Governance, Risk, and Compliance for the Al and GenAl Lifecycle across domains.

Controls

For each of the capabilities, security controls are summarized to mitigate all potential threats.

Extract of controls

- Robust access control
- Regular validation of SBOM
- Watermarking
- Input injection testing
- Data Minimization
- Data Separation

Deloitte.

Thank you.

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited (DTTL), its global network of member firms, and their related entities (collectively, the "Deloitte organization"). DTTL (also referred to as "Deloitte Global") and each of its member firms and related entities are legally separate and independent entities, which cannot obligate or bind each other in respect of third parties. DTTL and each DTTL member firm and related entity is liable only for its own acts and omissions, and not those of each other. DTTL does not provide services to clients. Please see www.deloitte.com/about to learn more.

Deloitte provides industry-leading audit and assurance, tax and legal, consulting, financial advisory, and risk advisory services to nearly 90% of the Fortune Global 500® and thousands of private companies. Our people deliver measurable and lasting results that help reinforce public trust in capital markets, enable clients to transform and thrive, and lead the way toward a stronger economy, a more equitable society, and a sustainable world. Building on its 175-plus year history, Deloitte spans more than 150 countries and territories. Learn how Deloitte's approximately 457,000 people worldwide make an impact

that matters at www.deloitte.com
