
The journey for *Work re-Architected* begins when we reframe the work conversation around outcomes to increase productivity.

A Typical Project.

- 1 Reframe the conversation to focus on outcomes that “humanize” work for greater productivity.
- 2 Prioritize and map those outcomes to capabilities and create “value flows” to humanize work.
- 3 Identify the existing or needed technologies to power those “value flows.”
- 4 “Re-architect” those technologies and deploy to the organization.
