

Build to Run. Run to Improve

Unlock the transformational potential in your core applications

Businesses have long turned to application management outsourcing to help keep core enterprise software running smoothly, securely, reliably, and cost-effectively. Those principles remain important. But in today's environment of revolutionary technological change and industry disruption, application management services should drive more of what you do in order to seize the potential of what you can become.

We provide a flexible structure that enables businesses to fine tune AMS to their IT and business objectives and bring the following benefits:

Programmatic approach for improved focus on optimization and innovation, not just on management and maintenance

Better cost efficiency and increased speed-to-market for application development

Adoption of leading automation technologies to improve service delivery and efficiency

Improved focus on delivering business initiatives and outcomes, rather than IT staffing

Deloitte's end-to-end capabilities across core enterprise applications and disruptive technologies, coupled with our expansive business domain and industry knowledge and Development-Security-Operations delivery model, mean we can help activate and amplify the potential for sustained innovation in your applications.

Tech fundamentals, transformed

Instant scalability of always-on global resources, faster ticket resolution—those fundamentals of enterprise application management certainly remain relevant today. Deloitte brings an added edge to your core applications by leveraging our global network of end-to-end technology specialists, our capabilities across today's most advanced applications and platforms, and our leading intellectual property and proprietary tools, propelling you to new horizons of efficiency, agility, automation, and scale.

Business value, achieved

Simply viewing AMS through the lens of cost reduction and increased efficiency is no longer enough. Your potential to seize markets and lead growth is now inextricably tied to the value that you can unlock from your applications. We help you look beyond core AMS requirements and realize the potential for continuous improvement and optimized total cost of ownership through a DevSecOps approach and our broad understanding of business strategy, markets, and industries. As a result, we help turn your applications into drivers of innovation and competitive advantage.

Industry and domain solutions, connected

We leverage a new model for application management to connect and drive solutions across every part of your business—from front office to back office. We draw on our deep industry experience and capabilities across business disciplines from supply chain, finance, and human resources to risk, compliance, and beyond. Then, we apply a customized approach to help speed development and deployment cycles and hasten adoption across your organization.

About Deloitte

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited, a UK private company limited by guarantee ("DTTL"), its network of member firms, and their related entities. DTTL and each of its member firms are legally separate and independent entities. DTTL (also referred to as "Deloitte Global") does not provide services to clients. Please see www.deloitte.com/about for a more detailed description of DTTL and its member firms.
