Total Testware™ Solutions

3. Solutions

3.1 Solutions — Overview

HERO

Test across the applications that power your enterprise.

Enterprise quality engineering extends across business applications, digital experiences, services and data platforms. Deloitte TotalTestware is positioned to support test automation across multiple application categories, helping organizations address testing needs across diverse technology environments.

Primary CTA: Explore Solutions | Secondary CTA: Request a Demo

Explore testing across your technology landscape

Web Automation — Support automation for browser-based applications and digital experiences.

Mobile Automation — Address testing needs across mobile applications.

API & Middleware Automation — Validate APIs, services and connected application interfaces.

Enterprise & ERP Automation — Support testing across complex enterprise applications and business processes.

Desktop Automation — Address automation needs for desktop-based applications.

Data & Database Automation — Support testing activities involving data and database systems.

Cross-Platform Automation — Address testing across connected applications and end-to-end business workflows.

One platform approach across diverse testing needs

Different application categories introduce different testing challenges. A connected automation approach can help teams organise testing activities and support quality engineering across the enterprise landscape.

Closing CTA

Bring your enterprise testing landscape into focus.

3.2 Web Automation

HERO

Automate testing across your web applications.

Web applications are central to customer experiences, employee workflows and enterprise operations. Changes to these applications need to be validated consistently as functionality evolves. Deloitte TotalTestware is positioned to support automated testing across relevant web application environments.

Primary CTA: Request a Demo

Key testing areas

- Functional validation of web application workflows.
- Testing of user interactions and application behaviour.
- Validation of business scenarios across relevant web experiences.
- Support for repeatable regression testing.
- Automation maintenance as application interfaces evolve.

Scope note

Browser compatibility and supported versions should be confirmed against the current TotalTestware product compatibility matrix before specific browser names or versions are published.

Closing CTA

Improve the consistency of web application testing.

3.3 Mobile Automation

HERO

Bring automation to your mobile application testing.

Mobile applications are an important part of modern digital experiences. They need to deliver reliable functionality across supported devices, operating environments and user journeys. Deloitte TotalTestware is positioned to support mobile application test automation as part of a broader enterprise quality engineering approach.

Primary CTA: Request a Demo

Key testing areas

- Functional validation of mobile application journeys.
- Testing of user interactions and application behaviour.
- Repeatable validation of important business scenarios.
- Regression testing as mobile applications evolve.
- Support for testing across confirmed device and operating system combinations.

Scope note

The supported device, operating system and application combinations should be confirmed before publication.

Closing CTA

Build confidence in your mobile application releases.

Primary CTA: Request a Demo

3.4 API & Middleware Automation

HERO

Validate the services and connections behind your applications.

Enterprise applications rely on APIs, services and middleware to exchange information and support business processes. Deloitte TotalTestware is positioned to support automation across relevant API and middleware testing scenarios.

Primary CTA: Request a Demo

Key testing areas

- API validation — test relevant service interactions and expected responses.
- Integration testing — support validation across connected applications and services.
- Business process validation — assess service interactions that contribute to end-to-end workflows.
- Regression testing — repeat relevant validations as services and interfaces evolve.

Scope note

Specific protocols, authentication approaches and supported API technologies should be confirmed.

Closing CTA

Strengthen confidence in your connected application landscape.

Primary CTA: Request a Demo

3.5 Enterprise & ERP Automation

HERO

Bring consistency to complex enterprise application testing.

Enterprise applications support critical business processes across finance, procurement, supply chain, human resources and other functions. Testing these environments requires an understanding of business workflows, application behaviour and the relationships between connected systems. TotalTestware is positioned to support automation across relevant enterprise application and ERP testing scenarios.

Primary CTA: Request a Demo

Key testing areas

- Business process testing — validate relevant business workflows across enterprise applications.
- Module-level testing — support testing across applicable functional areas and modules.
- Integration testing — validate interactions between enterprise applications and connected systems.
- Regression testing — support repeatable validation as applications evolve.
- Migration and transformation testing — support testing activities associated with enterprise application change programmes.

Scope note

The enterprise application proposition includes SAP, Oracle and Workday environments. Specific products, versions, modules and supported scenarios must be confirmed.

Closing CTA

Support quality across your enterprise transformation journey.

Primary CTA: Request a Demo

3.6 Desktop Automation

HERO

Extend test automation to desktop applications.

Many enterprise environments continue to rely on desktop applications to support important business operations. Deloitte TotalTestware is positioned to address desktop application automation needs as part of a broader quality engineering approach.

Primary CTA: Request a Demo

Key testing areas

- Functional validation of desktop application workflows.
- Testing of relevant user interactions.
- Repeatable validation of business scenarios.
- Regression testing following application changes.
- Support for desktop application testing within broader enterprise processes.

Scope note

Supported desktop operating systems, technologies and application types should be confirmed.

Closing CTA

Bring desktop application testing into your automation strategy.

Primary CTA: Request a Demo

3.7 Data & Database Automation

HERO

Strengthen confidence in the data behind your applications.

Enterprise applications depend on data to support business operations, reporting and decision-making. Data and database testing helps validate that information is processed, stored and made available as expected. TotalTestware is positioned to support relevant data and database automation scenarios.

Primary CTA: Request a Demo

Key testing areas

- Data validation — validate relevant data values and expected conditions.
- Database testing — support testing activities involving database-related operations.
- Application-to-data validation — assess relevant interactions between applications and underlying data.
- Business data scenarios — support testing of data conditions associated with business processes.
- Data-related regression — repeat relevant validations as application and data environments change.

Scope note

Database technologies, query support and data validation capabilities should be confirmed.

Closing CTA

Build greater confidence in enterprise data quality.

Primary CTA: Request a Demo

3.8 Cross-Platform Automation

HERO

Connect testing across applications and business processes.

Enterprise workflows rarely operate within a single application. A business transaction may involve web interfaces, enterprise applications, APIs, databases and other connected technologies. TotalTestware is positioned to support cross-platform testing needs across relevant application environments.

Primary CTA: Request a Demo

Key testing areas

- End-to-end business workflows — support validation across multiple application steps.
- Application interactions — test relevant exchanges and dependencies between connected systems.
- Integrated process validation — assess business scenarios that span different technology environments.
- Regression across connected systems — support repeatable validation when connected applications change.

Scope note

The supported cross-platform orchestration and end-to-end execution scope should be confirmed.

Closing CTA

Validate the business process—not just the individual application.
