Together makes progress

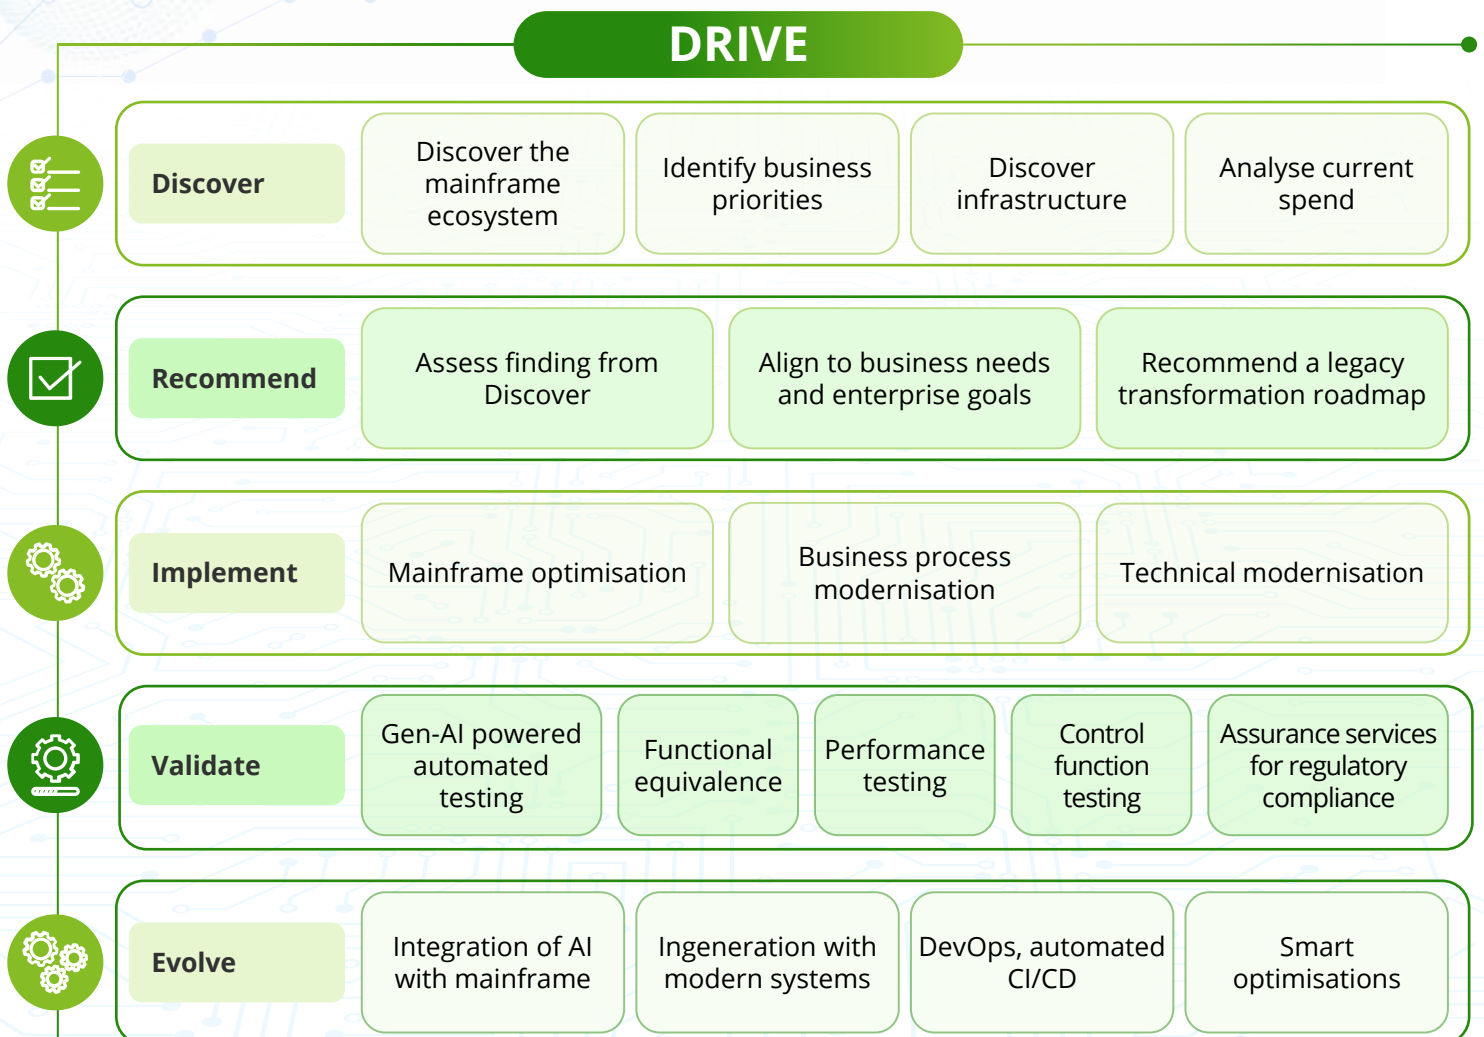

**DRIVE for
mainframe**

Private and confidential

DRIVE your mainframe strategy with Deloitte

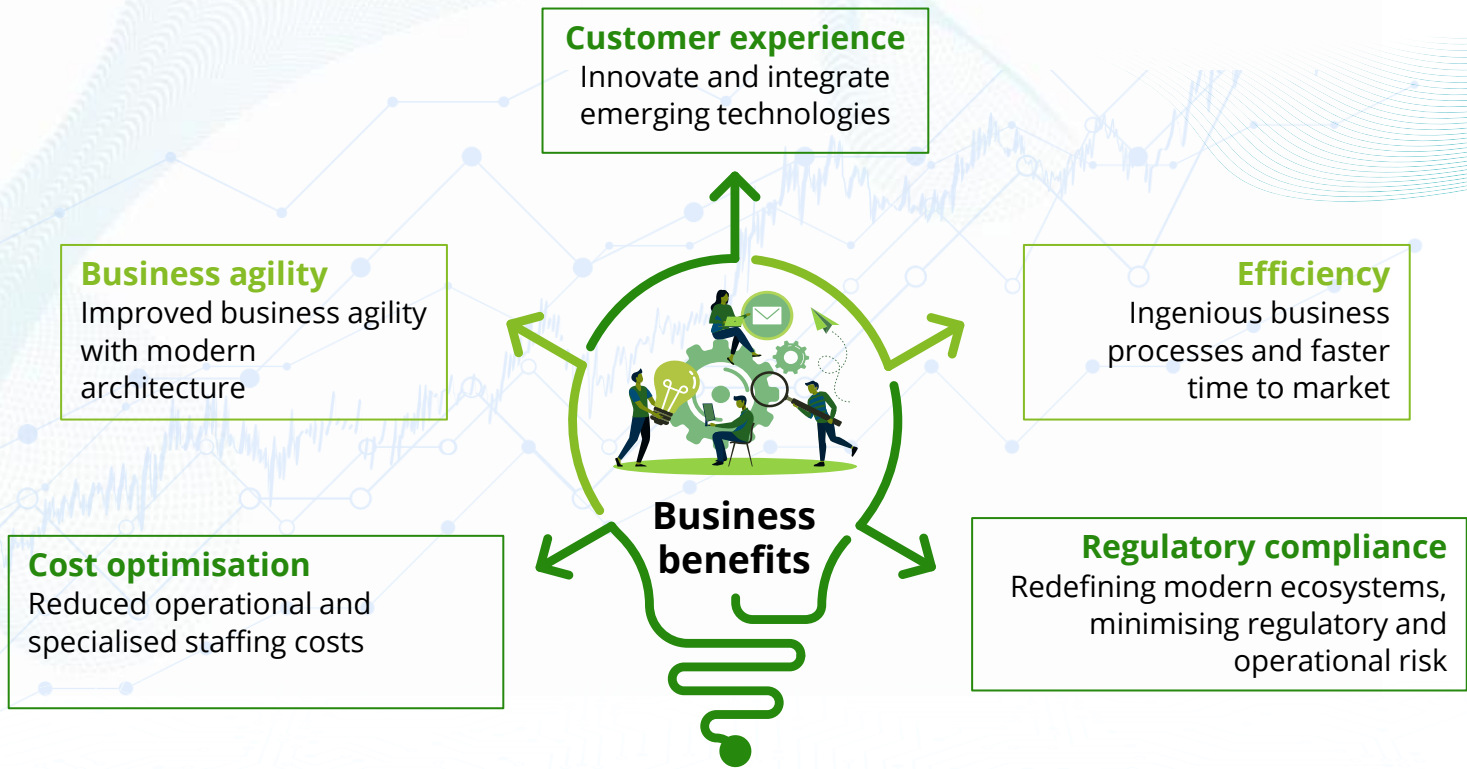

Secure, scalable and future-ready mainframes have been the foundation of large, successful enterprises for a long time, enabling resilience, scale, and security. As digital acceleration reshapes industries, their role evolves from legacy systems into strategic platforms that hold core business value and differentiation.

Deloitte's AI-powered transformation turns trusted foundations into strategic growth engines. This enables faster modernisation and reduces total cost of ownership. Further, weaving cloud, analytics and AI into every transaction to make it more efficient than ever before.

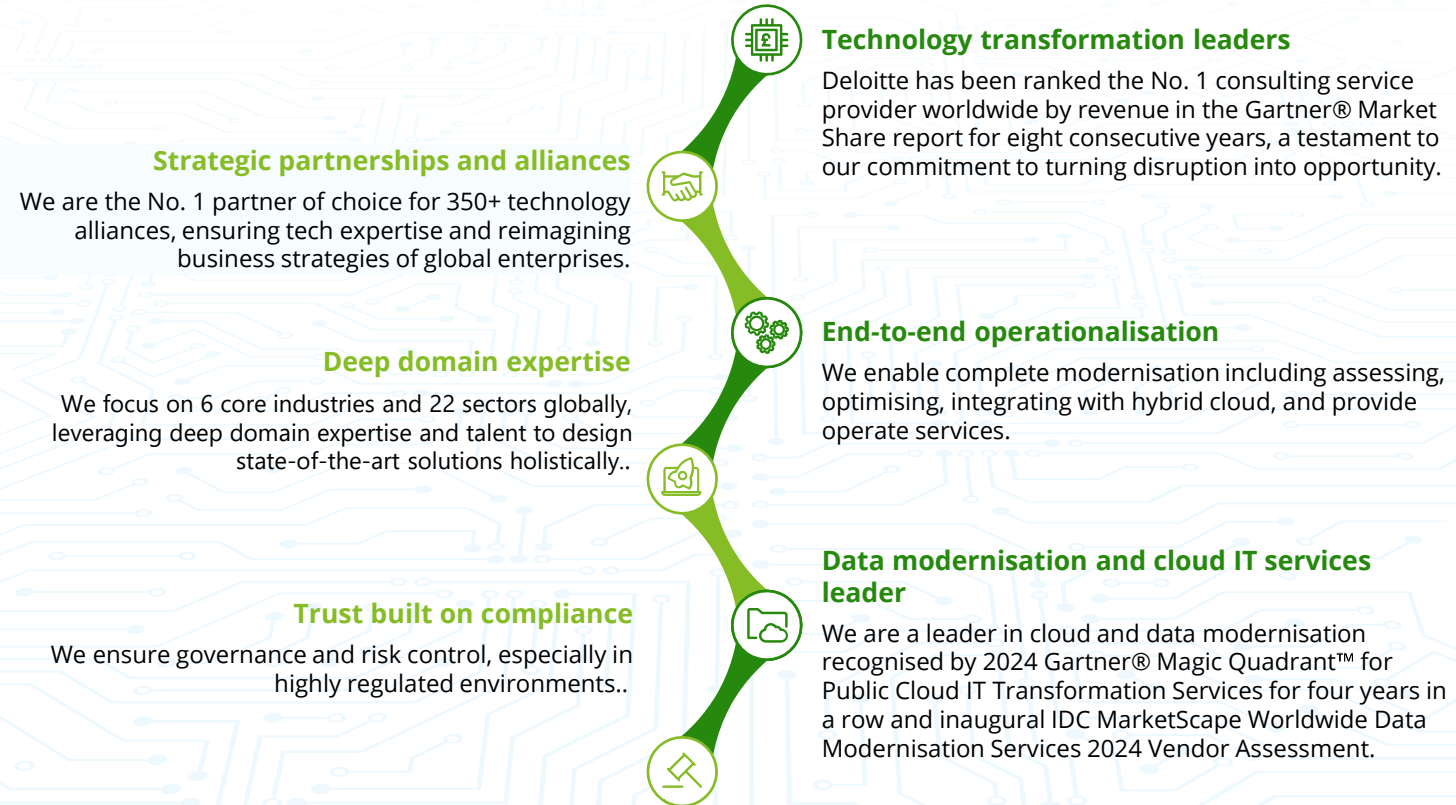

▶ Powering enterprise innovation

Unlock new business models, accelerate innovation and keep your mission-critical workloads running flawlessly

Why Deloitte?

▶ Deloitte success stories

Large European insurance company

Problem: The client was struggling with outdated technology, a shrinking resource pool, and high costs.

Solution: We re-platformed 16 applications by decommissioning the mainframe, migrating from COBOL and Gen to Java, and transferring 10.5M lines of code, 7.5k jobs, and 2.6TB of data.

Large European media company

Problem: The client wanted to find a pathway off the mainframe due to increasing licence costs, maintenance fees, and the limited ability to modernise legacy applications and integrate them with other platforms.

Solution: Deloitte automated the migration of natural-based mainframe applications to a Java-based system while retaining functionality and reducing costs by decommissioning mainframe hardware and software.

German passenger car manufacturer

Problem: The old system was hindering the performance and needed to be transformed from PL/I to Java on Azure.

Solution: Using Deloitte's in-house asset **innoWake™** tools, 100% of the source code was automatically translated, enabling automated testing through batch result comparisons between source and target systems and improving performance.

Large global investment firm

Problem: The client wanted to accelerate the journey from mainframe to cloud to align with their transformation strategy and roadmap.

Solution: We modernised mainframe Db2 through code mining, cloud-native development, agile delivery, test automation, and process re-engineering, migrating 20M lines of code across COBOL and Java, 5k+ jobs, 2k+ stored procedures, and 4k+ Db2 tables.
