

Exemplar is a newly developed reserving software solution that merges an innovative graphical interface with best-practice actuarial techniques. It has been designed to leverage the latest technological developments to provide a streamlined and seamless reserving environment.

Data & Inputs

- Data import wizard
- Triangles or transactional claims data
- Excel, CSV, SQL support
- Fully featured and highly performant compiled .NET Excel add-in, with bulk data import functionality directly from Excel
- Scalable processing algorithms allowing processing of data in excess of available memory

Methodologies

- Basic Chain Ladder
- Bornhuetter-Ferguson
- Average Cost Per Claim (ACPC)
- Generalised Cape Cod
- Berquist Sherman
- Mack
- Bootstrap
- Combinations of these

Interface

- Modern Windows GUI
- Office 2013-feel
- Focus on visualisation
- Multiple-screen support
- Dynamic results updating & refreshing
- Derived triangle functionality
- Triangle dimension adjustment

Outputs

- Rich result summaries
- Dynamic Excel-reporting through Exemplar add-in
- Static Excel export of results, assumptions, selections
- Customisable output dashboards
- Fully powered formula builder embedded

Innovative Features

Multiple concurrent user support through SQL Server with push notification messages & sync capabilities – designed with large group-wide reserving projects in mind

Roll-forward Wizard to streamline regular reserving reviews

Detailed review and audit trail functionality that includes system & user interaction logging

World leading visualisation engine under the hood

SQL-based data infrastructure

Online licensing system

Latest future-proof Microsoft® design platforms

Latest performance optimisation algorithms
