Tech Trends 2019

Beyond the digital frontier

ELOITTE'S *Tech Trends 2019* report identifies those trends that are likely to disrupt businesses in the next 18-24 months, from advanced networking to DevSecOps, serverless computing, artificial intelligence and more. In this year's annual report—our 10th—we also look back at a decade of technology evolution as forces such as digital, cloud, and analytics drove disruptive change in cyber, core systems modernization, and the business of technology. We then look to the horizon to examine technology's promise beyond the digital frontier.

MACRO TECHNOLOGY FORCES AT WORK

Exploring nine macro forces—analytics, cloud, digital, core modernization, business of technology, cyber, cognitive, blockchain, and digital reality—that are the backbone of technology innovation past and present.

INTELLIGENT INTERFACES

The ways people interact with technology today (through touchscreens, mice, keyboards) could soon be replaced with intelligent interfaces that are more synchronous and natural than ever before.

AI-FUELED ORGANIZATIONS

Companies should consider deploying machine learning and other cognitive tools systematically across their core business processes and enterprise operations to support data-driven decision making.

BEYOND MARKETING: EXPERIENCE REIMAGINED

In order to deliver the highly personalized, contextualized experiences that today's astute customers increasingly expect, CMOs and CIOs are partnering to enable a new generation of marketing tools and techniques.

NOOPS IN A SERVERLESS WORLD

The next evolution of cloud computing has technical resources completely abstracted from the underlying system infrastructure and traditional infrastructure and security tasks fully automated.

DEVSECOPS AND THE CYBER IMPERATIVE

DevSecOps fundamentally transforms cyber and risk management from being compliance-based activities—typically undertaken late in the development lifecycle—into essential framing mindsets.

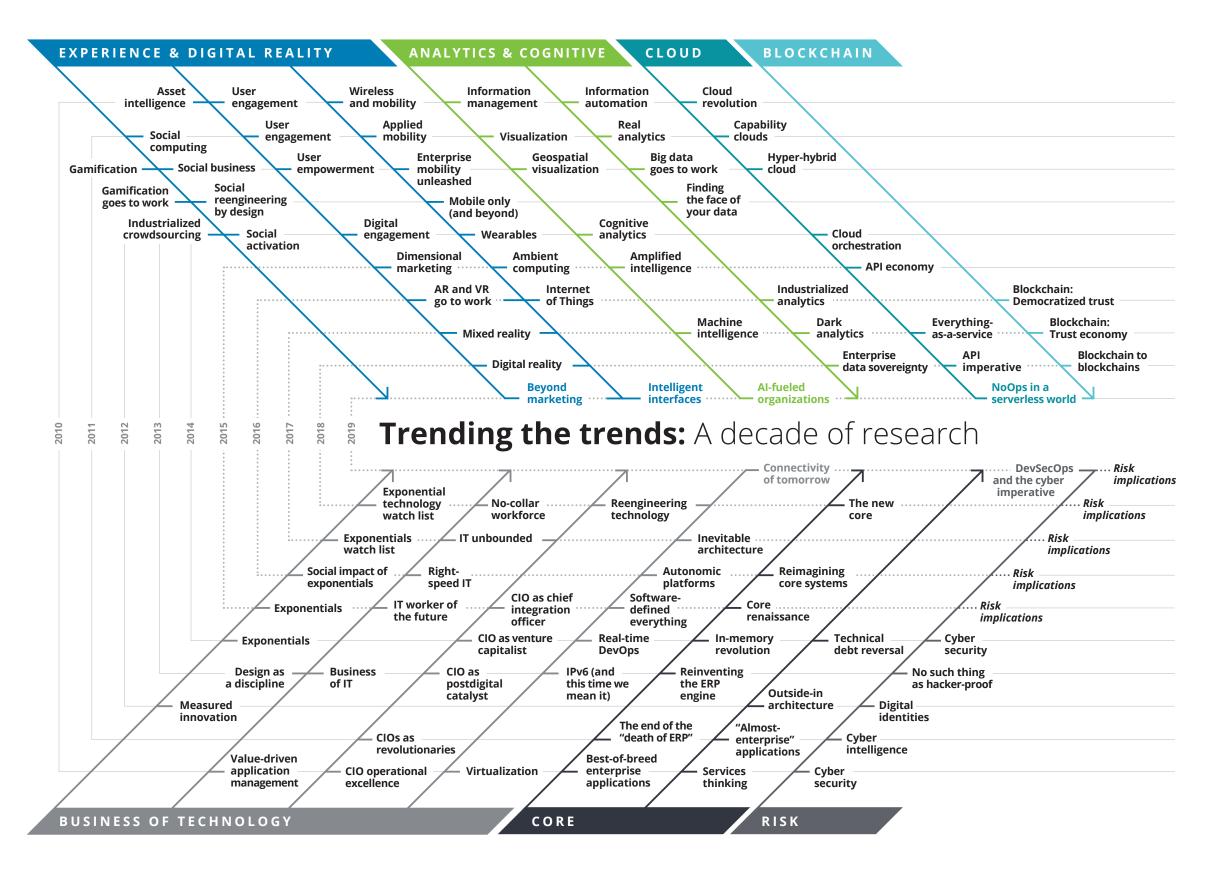

CONNECTIVITY OF TOMORROW

Rapid advances in connectivity capabilities and a growing spectrum of advanced networking products and services are becoming mission-critical components of CIOs' digital transformation agendas.

BEYOND THE DIGITAL FRONTIER: MAPPING YOUR FUTURE

Harnessing opportunities at the intersection of technology, science, and business is an essential part of demystifying digital transformation and making it achievable.
