

## Deloitte and TeamViewer to Accelerate Digital Transformation of Warehouse Logistics with Vision Picking

- *Tackling global challenges in the logistics sector such as increasing pressure on supply chains and high staff turnover rates*
- *Joint go-to-market, consultancy, and implementation for the powerful integration of TeamViewer's vision picking solution with SAP EWM*
- *Deloitte: "We are convinced that vision picking will become the new global standard for warehouse picking operations and will provide crucial improvements in many other warehouse processes"*

**GOPPINGEN / Germany, April 02, 2024** - Deloitte and TeamViewer have joined forces to digitalize manual work processes in the critical areas of supply chain and logistics. The new partnership aims at establishing vision picking as the leading standard for complex warehouse picking operations, tackling challenges specific to the logistics sector such as an ever-increasing pressure on global supply chains and high staff turnover.

As a first step of the cooperation, Deloitte and Teamviewer aim at offering and implementing the powerful combination of TeamViewer's vision picking solution with the leading SAP Extended Warehouse Management (EWM) through Deloitte's experienced logistics consultants. Designed for frontline workers and warehouse operators, the solution delivers benefits such as faster, hands-free picking, reduced errors, improved workplace ergonomics and faster onboarding. Warehouse managers profit from real-time monitoring, control over their operations, and easily customizable workflows. Relying on Deloitte's deep consultancy knowledge, companies can successfully introduce the solution in their warehouses without much effort.

Stijn Van Hoof, SAP EWM & TM CoE Lead at Deloitte, says: "With this partnership, we support customers to digitally transform their logistics processes and tackle their most pressing business challenges in this area. Companies running SAP EWM can seamlessly benefit from both Deloitte's comprehensive consultancy services and TeamViewer's leading AR platform to improve their warehouse logistics processes and overall picking efficiency.

Jan Junker, EVP Sales EMEA at TeamViewer, says: "The partnership with Deloitte is based on common goals: supporting companies in their digital transformation through cutting-edge technologies. Our vision picking solution significantly improves manual warehousing processes, resulting in faster operations, better accuracy, and overall higher productivity. Moreover, it reduces the training and onboarding time of workers in a high employee churn environment. I am looking forward to expanding use cases and jointly explore new opportunities for our solution together with Deloitte."

### About Deloitte SAP EWM & TM CoE

The SAP EWM/TM Centre of Excellence combines Deloitte's business knowledge with the SAP EWM and TM technology to help businesses optimize and successfully manage warehouse operations and transportation planning.

Our mission is to help companies transform and integrate their warehouse / transportation management processes and systems in the End-to-End Supply Chain, from strategy to execution, enabling them to:

- Lower operating costs & improve efficiency
- Improve warehouse & transportation efficiency
- Increase labor productivity
- Optimize space utilization
- Better manage value-added processes
