

## Deloitte delivers successful Dynamics 365 Finance and Operations implementation at global Life Science company

We are excited to announce a major achievement for the Deloitte Microsoft Technology Services Practice in Switzerland. We have successfully completed a Microsoft Dynamics ERP implementation at a global life sciences company headquartered in Switzerland. Our team delivered the core-model design and deployment of Dynamics 365 Finance & Supply Chain ERP within a 5-month timeframe. In addition, our client has entrusted Deloitte with providing application management services for the implemented system over the next three years.

### Project Highlights:

#### Challenges

The client's legacy Navision ERP platform was outdated, requiring manual process workarounds. They needed a modern solution to support rapid revenue growth and global expansion.

#### Solution

Deloitte identified 25 design gaps in the proposed MS Dynamics 365 solution and rescued the troubled project, delivering the ERP to the client's required timeline. Our Deloitte delivery team ensured a smooth transition and successful implementation.

#### Impact

The implementation supported the client's business strategy and planned revenue growth, enabling a global operating model with simplified and automated processes. Through establishing a managed service with Deloitte, the client will benefit from clear service levels and clarity of management costs.

**This achievement underscores our commitment to delivering exceptional value and innovative solutions to our clients.**

**Congratulations to the entire team for their dedication and hard work!**
