

CISO as a Service (vCISO) Deloitte Cyber Strategy & Transformation

In today's regulatory and threat environment, organisations need accountable cybersecurity leadership more than ever. Deloitte's **vCISO** assumes the role equivalent to a Chief Information security Officer (CISO) under regulatory expectations, **ensuring strategic cyber governance**, regulatory compliance, risk management, and incident readiness. This model **helps organisations fulfil mandatory governance requirements**, address the regional shortage of qualified cybersecurity leaders, and maintain a resilient, auditable security posture.

Cybersecurity Governance & Leadership

Ensure executive-level oversight of your cybersecurity strategy, governance routines, and decision-making, delivered through an experienced vCISO acting as your designated security leader.

Regulatory Compliance & Reporting

Maintain continuous alignment with NIS2, the Cybersecurity Act, ISO 27001 and related frameworks through structured evidence tracking, reporting, and regulator-ready documentation.

Risk, Threat & Incident Management

Strengthen your organisation's ability to manage cyber and ICT risks, monitor threats, and maintain incident readiness with ongoing expert supervision and operational security support.

Our team of **cybersecurity, legal, risk, and technology experts** delivers a comprehensive vCISO function tailored to each organisation's needs.

Cyber Governance & Leadership

Establish and operate your cybersecurity governance model, lead Cybersecurity Committees, oversee policies, and drive strategic alignment across ICT, operations, and management.

Risk, Threat & Incident Management

Manage cyber and ICT risks, maintain risk & asset registers, oversee supplier security, and coordinate incident readiness, threat visibility, and vulnerability oversight.

Regulatory Compliance & Reporting

Our vCISO ensures alignment with NIS2, national Cybersecurity Acts, Implementing Regulations, ISO 27001, DORA (where applicable) and other frameworks, including continuous reporting, evidence management, and regulator liaison.

Continuity & Operational Oversight

Provide ongoing supervision of ICT changes, project governance, business continuity, crisis preparation, and operational cybersecurity across the organisation's processes and supply chain.

Incident Management & Readiness

Strengthen your organisation's ability to detect, respond to and recover from cyber incidents through defined procedures, exercises and expert coordination.

Business Continuity & Operational Resilience

Support resilience planning, ICT project governance, change management and business continuity activities to ensure service reliability and readiness.
