Outbound invoices

The issuance of outbound electronic invoices (AR) and the digital reporting of invoice data to the competent tax authority can be automated by setting up the data transmission process between the accounting or invoicing system and VAT*Online* through a secure API or SFTP connection.

Inbound invoices

The receipt of inbound electronic invoices from suppliers (AP) and the digital reporting of invoice data to the competent tax authority can be automated by setting up the direct invoice data transfer to the company's accounting system in a custom format, or they can even be posted in real time.

Dashboards and displays

Dashboards and standardised reports provide a comprehensive overview of the status of invoices processed by the system. Various search and filter options allow seamless data reconciliation and validation, while automated email notifications can be set up to send alerts for critical events or errors.

- E-invoicing and e-reporting compliance in multiple countries with a single integrated solution
- Secure and automated connection with the accounting or invoicing system
- Visualisation of electronic invoices in a PDF format with export options
- User-friendly web application, accessible from anywhere, no installation required
- Customisable display and filter options
- Personalised notifications and automated email alerts
