

## ASSET TRACKING WITH IBM MAXIMO

# Connect and protect what matters

Many organisations track, inventory, and professionally manage all their owned and leased assets—be it as part of a government requirement or for financial accountability purposes. Some even need to do annual inventories and report on missing or misplaced assets. Doing this manually via spreadsheets and in-person inventory counts is time consuming and doesn't help with real-time understanding of operability status for quick deployment. Our asset tracking solution, powered by IBM Maximo, is here to help you manage asset life cycles, track and tag operational assets, and report out quickly.

### Features

Deloitte's asset tracking solution supports life cycle asset management and tracking by modernising custodial processes and providing real-time visibility into asset locations and availability using IBM Maximo combined with IoT technologies. This includes:

-  **Asset inventory.** Enable rapid periodic complete or cycle inventories via mobile and IoT inventory methods; generate inventory orders and listings
-  **Asset tracking and tagging.** Tag assets based on value and criticality for future inventory identification or real-time tracking; track handoffs for special handling assets; track low and high-value assets
-  **Asset management.** Register and inspect assets upon receipt (onboarding); maintain status through disposal; deploy critical assets and tools where they're needed; manage custodial relationships
-  **Asset reporting.** Run Excel and BIRT reports on asset availability and history
-  **FedRAMP authorized.** Can be installed as a set of configurations into the FedRAMP Authorized IBM Maximo Software-as-a-Service offering
-  **Guidance from Deloitte.** Learn from our experience with asset strategy development, solution implementation, asset onboarding, physical inventories, and more

### Potential benefits

Implementing asset tracking from Deloitte and IBM Maximo means you can gain better visibility into your assets and operations, do more with less, comply with regulations, and drive accountability. Benefits may include:

- Quick-to-market inventory management capabilities
- Streamlined asset onboarding, inventory, handoff, and disposal processes
- Visibility into where assets are, their status, usage, and reporting details
- Simplified statutory inventory reporting
- Ability to reallocate existing resources for deployment where they're needed most
- Asset governance and accountability
- Financial and operational efficiency
- Compliance with government regulations
- Reduced cost by avoiding asset duplication, waste, and unnecessary manual counts

### Deloitte and IBM: A powerful combination

Together, we help you deploy and scale enterprise asset management solutions with confidence.

-  **End-to-end experience.** We can support you with strategy development, implementation, and operation of the solution.
-  **Acceleration.** Our solution deploys quickly and can scale based on your needs. It also leverages the strength of IBM Cloud, AI, and data technologies for real-time asset tracking and monitoring.
-  **Trusted.** IBM Maximo is a demonstrated cloud-based or on-premises enterprise asset management tool.
-  **Enhanced capabilities.** Our solution allows for ordering an inventory at a specific location—an extension of existing IBM Maximo capabilities.
-  **More than just technology.** We also incorporate people, process, governance, and culture elements into the project.

### Think you might need help with asset tracking?

Here are some signs to look for:

You don't currently have an asset tracking solution in place and your organisation size, scale, and/or asset complexity exceed what you can do using spreadsheets

You already have IBM Maximo and are ready to add asset tracking and inventory capabilities

You want to move to the next level of sophistication, but your existing solution can't provide that functionality

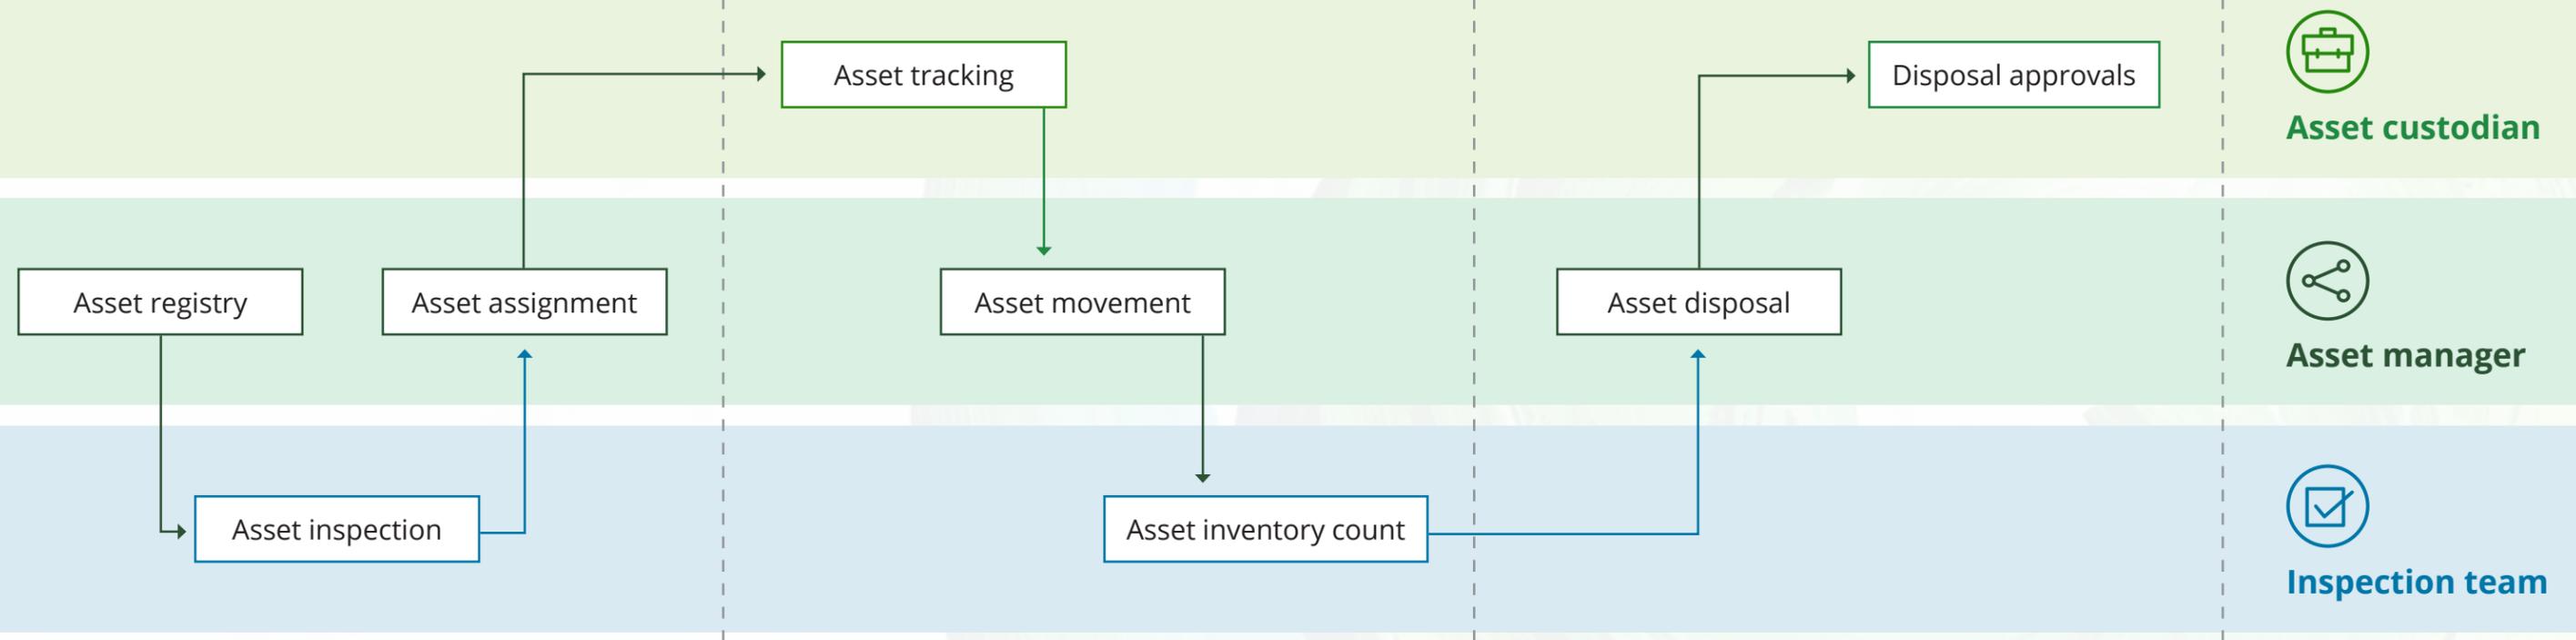

You manage ongoing manual inventory processes
