Introduction

A welcome from Suzanne Kounkel, Deloitte US chief marketing officer Welcome to 2023 Global Marketing Trends!

This report comes from Deloitte's CMO Program, a team committed to connecting chief marketing officers with the tools and resources needed to succeed. For this year's report, insights were gathered from 1,015 C-suite executives and leaders from brands across the world to begin to understand how they plan to approach 2023.

From these ideas, and through consultation with subject matter experts across Deloitte, this year's report explores how we as marketers are uniquely positioned to create new levers for growth. During these volatile times of financial uncertainty, we should use our power as storytellers to keep the critical matter of sustainability at the top of our agendas—especially at a time when it could be deprioritized—and suffuse creative thought to stimulate growth throughout our companies.

2023 Global Marketing Trends aims to act as a guide for these issues at a critical point in time. It also offers meaningful considerations for propelling your brand and organization forward in the coming year and highlights the technologies we think are set to make the biggest splash.

We may operate in different industries, we may talk to different customers, but as CMOs, we face similar business decisions. I'm fortunate enough to work at an organization that allows me to collaborate with leaders and experts from all corners of the business world. I hope that by sharing their knowledge with you, it will not only help your business grow, but help our profession flourish.

Regardless of what challenges lie ahead, this report could help you take control of your marketing strategy. So, get reading and please get in touch if we can be of help to you. My colleagues and I are here to support you.

I can't wait to see what we build together this year,

Suzanne Kounkel
Deloitte US
chief marketing officer

01 02 03 04

What are the top priorities of chief marketing officers in navigating economic downturns?

Marketing has gone through a renaissance over the past 10 years, but while much has changed, there is likely much more change still to come. Where there was once only a promise of marketing acting as a driver of accountable growth, today that promise has been realized. This promise is partly due to capabilities such as dynamic, one-to-one personalization, where each customer has the right message at the right time and place; or through better ways of running a marketing organization, where teams and partners can spend more time focused on strategic delivery across the business versus executing on tactics. The introduction of technology and data has forever changed marketing, giving it a seat in the boardroom.

The past two years spent in a global pandemic have only deepened marketing's impact. There has been growth, innovation, and agility in the way marketing has reacted to help navigate and thrive through dramatic and unprecedented times. Not surprisingly then, within Saudi Arabia, 32% of company leaders surveyed plan to invest in deploying brand as enterprise-wide strategy within the next 12 months.

Additionally, 40% of company leaders surveyed in Saudi Arabia say they will invest in developing, acquiring, and retaining talent over the next 12 months. Based on a global survey of chief marketing officers (CMOs), we identified three ways CMOs are leading the charge and driving impact beyond cutting costs.

Investing in marketing could contribute to future growth. A CMO can think like a chief financial officer but still apply their own unique mindset.

CMOs' top priorities to consider during economic instability

As part of our global survey, many brands surveyed have indicated that navigating the current state of economic instability and rising inflation is their top concern for the coming year. But rather than hedging their bets and cutting costs, brands are answering this instability with an investment mindset: growing their organization's capabilities and capacity to endure whatever tribulations an economic downturn may bring.

Innovative companies
are likely to reduce
costs, increase customer
engagement, and pioneer
entirely new offerings for a
piece of the budding market.

We explored what CMO's are doing to secure their companies against current and anticipated economic instability. Their responses indicated that their top three priorities are:

- Accelerating the move to new digital technologies or platforms
- Expanding into new markets, segments, or geographies
- 3. Implementing systems or algorithms to enhance customer personalization (figure 1)

While we examine each of these investment areas in depth, our conversations with CMOs reveal that these top three priorities are often linked.

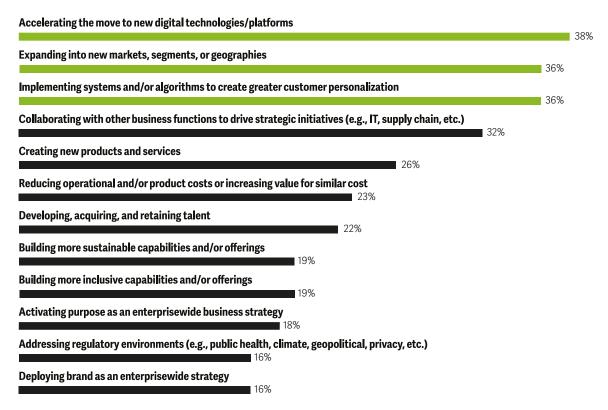

Accelerating the move to new digital technologies or platforms

Digital platforms and technologies offer a long list of use cases and benefits for marketing. Well-designed digital platforms can streamline and simplify the customer experience, incentivizing customers to engage more deeply on digital platforms and capturing valuable customer data. Capitalizing on this data can offer opportunities to improve customer loyalty, satisfaction, and lifetime value through better personalization and decreased friction at every step in the customer journey.

Our CMO survey respondents shared which technologies they have their eye on. Some marketers are prioritizing artificial intelligence (AI) and analytics to help orchestrate better experiences and paint a more holistic picture of the customer. Other frequently cited technologies and platforms include virtual reality, augmented reality, social platforms (such as through social

01 02 03 04

FIGURE 1: Chief marketing officers' top priorities for the next 12 months

Source: 2023 Deloitte Global Marketing Trends executive survey, conducted in June 2022.

commerce), and digital currencies. While the use cases and benefits of these technologies and platforms vary, we still wanted to understand why CMOs now see a need to accelerate their adoption.

Bhavesh Morar, Partner, Technology Consulting, Deloitte Middle East helps illustrate this underlying trend: "Organizations in the Middle East are looking at technology to adapt, deliver and thrive in a competitive marketplace. Leading organizations are leveraging emerging tech such as blockchain cloud and artificial intelligence to transform themselves."

While technologically savvy consumers may expect more from their digital experience, meeting and exceeding these expectations could help brands capture an entirely new customer base on top of building and retaining loyalty within their existing base. Expanding the customer base is also the second-most important priority for CMOs in the coming year.

Expanding into new markets, segments, or geographies

As a degree of attrition can be expected during an economic downturn, tapping into new markets can dampen this impact and help set the business up for future success.

While there are many avenues to expanding the customer base, our interviews with CMOs revealed that their efforts often directly tied the digital landscape with market expansion. Gregor Eicher, head of marketing and sales for Bank Cler, says his organization is using a strategy of expansion by refocusing on digital channels: "We're a young brand, so we're still in a growth phase. We are decreasing physical touchpoints and moving to digital touchpoints. We want to increase product awareness and bring in new customers for our smart banking app. We want to use this as a key channel for the bank."²

This is relevant for KSA brands with an international footprint as an increasingly digitally savvy world can bring a new set of opportunities for capturing customer segments but can also reset expectations as customers begin to view a seamless digital experience as table stakes.

Improvements in digital capabilities may also help enable a new level of precision in marketing that could open new growth opportunities for the company. Microsegmentation of customer cohorts is maturing, and investments provide new ways to sense and help react to changing market conditions in more precise and relevant ways. It's no longer about reaching as many customers as possible, but instead reaching the right ones. These digital capabilities and systems that can improve customer targeting go hand in hand with enhancing CMOs' final top priority.

Implementing systems or algorithms to enhance customer personalization

The third-most important priority our respondents shared is using systems or algorithms, such as data platforms and machine learning, to enhance customer personalization. New platforms and systems that integrate first-party data from customers with information about geographic, sociopolitical, and even weather and climate data can assist CMOs in uncovering new insights into customer behavior and preferences from larger sources of data. The evolution in personalization brings data directly into the hands of marketers and arms them with a detailed understanding of the factors that drive consumer behavior, helping to predict a customer's likelihood of purchasing or churning, or their lifetime value.

It's important to note that these types of detailed segments are fluid and evolving, so dynamic segmentation becomes critical. However, through Al and machine learning, combined with experimentation and a test-and-learn culture, brands can dynamically tune their marketing and messaging based on ever-changing consumer behavior.

For example, in Saudi Arabia, 18% of company leaders surveyed plan on accelerating the move to new digital technologies/platforms in the next 12 months.

Implementing these systems successfully can require coordination and end-to-end integration within the organization. Antonia Lepore, CMO of AXA, stresses this point: "If you want to do really good personalized and automated marketing, you need help from your IT colleagues, you need data colleagues, and the systems have to talk together." 3

While AI and other algorithms can help improve personalization at scale, these capabilities should also be paired with other human-centered methodologies, such as behavioral science or ethnography, to build a complete picture of the customer and uncover the why behind the data. Cristian Cabello, CMO of main Latam car dealer Derco, stressed the importance of a joint methodology: "Data will lead us to the points of contact with advertising [that] are increasingly personalized and more relevant—but here I also have to be emphatic that artificial intelligence isn't enough for us to put together models, if we don't combine or accompany it with a deep human knowledge through ad hoc research of our clients. The key to generating this personalization is with a correct understanding of the client, mixing data with research on the client's experience."4

Our survey results indicate that the majority of CMO respondents currently do not have such capabilities in place—but this is set to rapidly change. Globally, thirty-eight percent of CMOs are looking to deploy the capabilities that enable this type of personalization within the coming year, with another 12% within two years⁵—signaling a major shift for the field of marketing.

"If you want to do really good personalized and automated marketing, you need help from your IT colleagues, you need data colleagues, and the systems have to talk together."

—Antonia Lepore chief marketing officer, AXA

How can other CMOs navigate these same priorities?

• Partner well—or integrate completely. Having leading tech alone will only get you so far. To accelerate your brand's move to new digital technologies and platforms, Lepore stressed the need for CMOs to work closely with key partners across the organization. Identify and confer with stakeholders on how to optimize these technologies for everyone's benefit, and to help ensure a seamless backend integration. Some of the most progressive companies are working to break down these walls entirely, establishing data science and technology as core functions of marketing.

- Test often. With an increasingly digitally savvy society, Nägeli observes that expanding into new markets can correspond directly with expanding operations onto digital platforms. However, a difficult customer experience on a hastily rolled-out website or app can discourage both current and potential customers from engaging with your brand. CMOs should consider carefully testing and honing platforms to accommodate customer needs and help facilitate a seamless customer experience before leaning into this strategy.
- Combine data science with a human touch.
 Data science provides an important but incomplete piece of the puzzle. As Cabello notes, brands should blend data with human-centered methodologies to create a more complete picture of the customer, prevent mistakes an algorithm can't always understand, and cultivate connections with the customer.

As sustainability and equity continue to be important for consumers, two industries are leading the way in their efforts—setting an example for other industries and even consumers.

Sustainability is one subject that has captured the attention of marketers for several years. Once seen as a hot-button issue, sustainability has grown into a matter that is not only the right thing to do as a responsible corporate citizen but can also be good for business. Brands that focus on sustainable business practices can become more relevant and profitable as well as grow: all the tenets that chief marketing officers (CMOs) strive for. These practices also become a lever that brands can use to stay ahead of cultural trends.

Sustainability as an imperative for growth

Sustainability is an overarching ethos that requires developing a business model that is sustainable for the earth, the economy, and society. These matters are increasingly vital to meet market, regulatory, and governmental demands and are also a central concern for consumers. Many brands are focusing on sustainability, defined broadly, as a key part of building a brand with staying power.

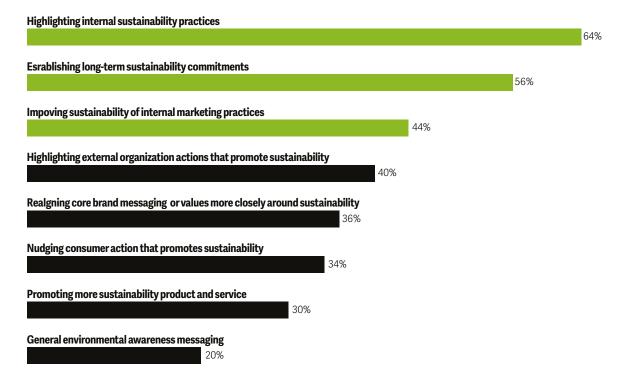

How are brands responding to the growing imperative of investing in sustainability issues? A Deloitte survey of 1,015 CMOs including those from Saudi Arabia, indicates that brands are concentrating their efforts on shoring up their own internal sustainability practices as opposed to focusing externally on influencing customer behavior.¹For example, brands working on internal sustainability might be focused on reducing paper waste or energy usage, or creating more sustainable or transparent supply chains, among other actions.

■ 01 **02** 03 04

FIGURE 1: KSA brands lead by example; focusing on internal sustainability initiatives ober influencing consumer behavior

Percentage of CMO responses

Source: 2023 Deloitte Global Marketing Trends executive survey, conducted in June 2022.

Brands reported that their top three priorities for sustainability efforts this year include (figure 1):

- Improving sustainability of internal marketing practices
- Promoting more sustainable product and service offerings
- Establishing long-term sustainability commitments

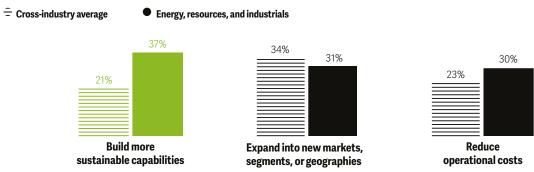

Internal sustainability efforts can not only help establish the authenticity of a brand's marketing initiatives—building trust with consumers—but they can also help the brand build a more secure, sustainable future for itself in the face of heightened global uncertainties. Notably, our research shows that many brands are taking ownership of sustainability actions and trying to lead by example. In KSA for example, 64% of brands surveyed highlighted internal sustainability practices and 56% of respondents have established long-term sustainability commitments.

While some brands may feel the impulse to pull back on sustainability in times of economic uncertainty, these responses show that a strong focus on sustainability should continue as consumers remain deeply concerned about global and economic events and expect proactive action toward protecting the wellness of the planet. Marketers should remain vigilant on meeting and exceeding expectations on matters of sustainability to remain relevant in the marketplace.

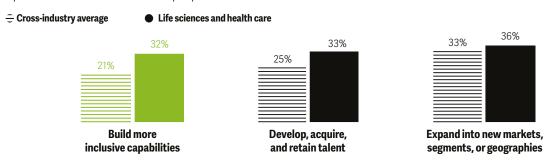

Bart Cornelissen, Partner, Energy, Resources & Industrials Leader at Deloitte Middle East echos this sentiment: "Any change takes time. Especially when you talk about such a complex system like sustainability for example. It has taken decades to build up our current system. You can't just switch it and go from one source to fully renewable. We need to continue to find additional solutions in the meantime."²

FIGURE 2: The top sustainability priorities of the energy, resources, and industrials (ER&I) and the life sciences and health care (LS&HC) industries

Energy, resources, and industrials top 3 priorities

Life sciences and health care top 3 priorities

Source: 2023 Deloitte Global Marketing Trends executive survey, conducted in June 2022.

As marketers consider their sustainability efforts, our data suggests they should consider a "be, say, do" approach in which they begin by developing internal practices that are aligned with their purpose. This should be done *before* brands focus on communicating their values externally, and before they begin developing external practices aligned with their values.

"We have to have answers to [sustainability]. This is not a trend; this is a must because we have only one earth."

—Michael Schuld,chief commercial and marketing officer,MediaMarktSaturn Retail Group

Driving sustainable growth: Health care and energy are leading the way

Globally, when we looked at marketing priorities by industry, two industries stand out as placing a high emphasis on sustainability and equity: Energy, resources, and industrials (ER&I) has "building more sustainable capabilities" as its top priority, at a rate nearly double the cross-industry average. Meanwhile, life sciences and health care (LS&HC) has "building more inclusive capabilities" as one of its top three priorities (figure 2).

The reason behind this emphasis could be that global events of the past few years have forced companies in the ER&I and LS&HC industries to adapt quickly, in some cases even before they were ready. To help ensure their organizations are prepared for unexpected challenges, CMOs can look for lessons from these industries that are already focused on social issues.

ER&I invests in the future by focusing on sustainability

When asked how they plan to improve customercentricity in marketing efforts, ER&I respondents cited meeting customer values. Since customer values increasingly include sustainability and equity, it is no surprise that these organizations were most likely to report an emphasis on sustainability efforts this year. Affirming this locally, for Saudi Arabia, 67% of ER&I company leaders are highlighting internal sustainability practices as part of their marketing strategy.

Kevin Moens, corporate director for sales and marketing at Eastman, explains Eastman's deep commitment to sustainability: "In the coming years, we are committed to a strong investment strategy in sustainability, regardless of the macroeconomic environment. We are investing in molecular recycling technologies that enable us to unzip plastic waste and bring the polymers back to their basic molecular components, allow-

ing for infinite recyclability and bringing about a truly circular economy. These technologies produce virgin-like plastics with a substantially lower carbon footprint compared to the legacy fossil feedstock-based processes, an important element as we look to tackle both the plastic waste and climate crises." He notes that this emphasis is being driven from all sides: governmental regulations, potential, and current talent, and consumers themselves.

Bree Sandlin, vice president of lubricants marketing for Shell, likewise explains that Shell's efforts "in adapting sustainable methods and products [are] absolutely critical to Shell's long-term success," based on its deep connection to customers and their needs. She says, "Shell has publicly set an ambition of being a net-zero emissions energy company by 2050 or sooner." To accomplish this ambitious goal, Shell has engaged in several sustainability initiatives, including building a portfolio of sustainable products and services to help

reduce the carbon footprint of its customers, using more recycled materials in products and packaging, and decarbonizing its supply chain operations. These ambitious internal plans also aim to help Shell introduce customers to new decarbonization opportunities. By focusing their efforts internally now, brands can set an example for consumers in making sustainable choices down the line.⁴

LS&HC builds value through equity

Equity issues have been important in LS&HC for a long time, says Kathryne Reeves, CMO at Illumina, but recent world events have made them even more pressing: "[W]e didn't really need to read a study to tell us to care about equity. Our customers tell us. I think COVID exposed the deep inequities, particularly in western economies, between the haves and the have-nots. We praised the caregivers, the supply chain workers. We said all the right words, but at the end of the day, many

of those people have substandard health care, and we saw that in the mortality rates."5

During the height of the pandemic, Illumina created technology to track COVID-19 variants globally, providing data for global leaders to use to protect the health of vulnerable members of society.

On bringing sustainability and equity together to improve the health of consumers and the planet, Bart Cornelissen, Partner, Energy, Resources & Industrials Leader at Deloitte Middle East says: "To actually make it work, we need to set up innovation hubs and try to collaborate. We're trying to build up a whole new ecosystem of partners which will need a tremendous amount of investment and the only way to do that is to work to-

gether."6

Sustainability for uncertain times

Organizations that wish to thrive in the future should continue to invest in the kinds of products and marketing efforts that help ensure a healthy, equitable world *before* circumstances become urgent. We recommend that marketers consider the following in their sustainability efforts this year:

 Don't pull back. Although cutting down on sustainability investments might feel tempting during a time of economic uncertainty, marketers should continue to invest, retaining a sense of long-term perspective about the socioeconomic demands around sustainabili-

- ty on the horizon.
- Look inward. Marketers can infuse sustainability throughout the entire life cycle of the product or service—leading to improved efficiencies, increased brand value through customer alignment, and ongoing impetus for growth.
- Unify your organization. Marketing can and should play a leading role on sustainability issues within their organizations. Marketers excel at telling stories and rallying people behind their efforts. These skills should be leveraged to allow them to lead the charge on internal sustainability efforts.

Stacy KempPrincipal, Customer & Marketing,
CMO Program

Data and analytics may have gained prominence over creativity in addressing modern marketing challenges, but the latter can still be valuable—if done the right way.

Some may say that being creative is a fundamental part of the human experience. It can be a means of discovering ourselves, overcoming adversity, and finding a way to inspire hope in challenging times. Creativity is a process our brains could go through to see a problem in a new light and find a solution that works outside the bounds of the "standard approach." But in the business world, which prioritizes optimization and guaranteed results, thinking outside the box can risk our careers, success, and relationships. Often, we stick to the road well travelled with playbooks, mimic our competitors, or make incremental improvements to tired methods.

Chief marketing officers (CMOs) may be the executives best positioned in the organization to emphasize the importance of creativity in a business. Whether during a time of transition, as a business seeks to develop new markets by finding unmet needs, or in an economic downturn when customers, employees, and partners need the inspiration to find resilience, CMOs can be the force behind never letting the business settle for the status quo.

Creativity in the spotlight

Growth has been a primary responsibility for CMOs. However, as generating growth becomes more complex due to rapid societal, technological, and **economic changes**, many brands have responded by doubling down on data and analytics. While these analytical tools are now often viewed as essential for any contemporary marketer, there are indications of an imbalance. Organizations may now lack the creativity needed to meet the challenges of the modern business world, as manifested in fewer creative leaders in the C-suite and lower emphasis on creative skills among CMOs and marketing talent.¹

Creativity can go well beyond brand communications and advertisements, using innovative thinking to shape how systems are designed, challenges are converted into opportunities, employees collaborate, and organizations engage with customers and other stakeholders.

Our Deloitte Saudi Arabia survey respondents indicate that creativity in this form does, in fact, contribute to growth. High-growth brand respondents (defined as those with annual revenue growth of 10% or more) are more likely than their negative-growth peers to have the mindset and processes to allow creativity to flourish. Not only are higher-growth brands more likely to view creative ideas as essential to longterm success, they are also more likely to create an environment that supports creative thinking by encouraging risk-taking and cross-functional collaboration (figure 1). Indeed, 98% of company leaders within Saudi Arabia surveyed agree their organization promotes cross functional collaboration to foster new ideas.

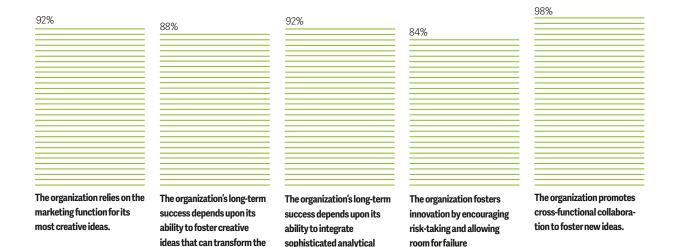

And at a time when we are seeing a shift from creative skills to analytical skills across the marketing function, high-growth brands surveyed are more frequently doing the opposite by considering creative thinking as one of the most important attributes for talent.² Hussein Dajani, Partner, Customer & Marketing, Deloitte Digital says: "While CMO's are leading on creativity within their organization, they need to nurture that creative culture from within in order to ensure that the organization reaches its creative aspirations. And more importantly, they are able to deliver on human business solving ideas."

Organizations may now lack
the creativity needed to
meet the challenges of the
modern business world, as
manifested in fewer creative
leaders in the C-suite and
lower emphasis on creative
skills among CMOs and
marketing talent.

business

FIGURE 1: High-growth brands are more likely to have the mindset and processes to allow creativity to flourish

Organizations that responded "strongly agree" on aspects of creativity by growth rate

capabilities into its strategy.

Taking the creative lead

One of the features of this new approach is that creativity is no longer limited to select individuals or teams. In fact, joint research from Deloitte Digital and LIONS reveals that one of the key elements of successful creative business transformation is finding "hidden" creatives from surprising sources—not just every employee, but also external partners, suppliers, and customers, all of whom can act as wellsprings of creative ideas.³

While creative ideas can come from any of these sources, the CMO is sometimes best positioned to be the champion of identifying and activating these ideas across the enterprise. As the executive closest to the consumer, translating these ideas into practical business applications may be key to driving transformative success. It is no surprise then, that we see companies in KSA focused on marketing for creativity with 92% of respondents relying on the marketing function for their organization's most creative ideas (figure 2).

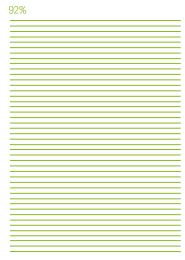

■ 01 02 **03** 04

CMOs might consider the following strategies to encourage creativity in their organizations:

• Redefine what creativity can offer. Creativity is no longer confined to single advertisements or campaigns. This shifts the priority for CMOs from delivering one-off projects to consistently delivering products, services, and experiences that allow a brand to stand out. Hussein Dajani, Partner, Customer & Marketing, Deloitte Digital agrees: "Look at the untapped opportunities that are given to you from the organizational data that you are capturing and put them into effect by delivering creative ideas across products, services and solutions."4

FIGURE 2: CMOs and marketing are best positioned to drive organizational growth through creativity

KSA organizations that responded "strongly agree" to relying on the marketing function for their most creative ideas

The organization relies on the marketing function for its most creative ideas.

Source: Deloitte Global Marketing Trends executive survey, June 2022.

• Bring the rest of the organization along for the ride. While CMOs and the marketing function can play a lead role in a brand transformation, all functions should be aligned on business aspirations. This means ensuring marketing and innovation teams are working across the entire business.⁵

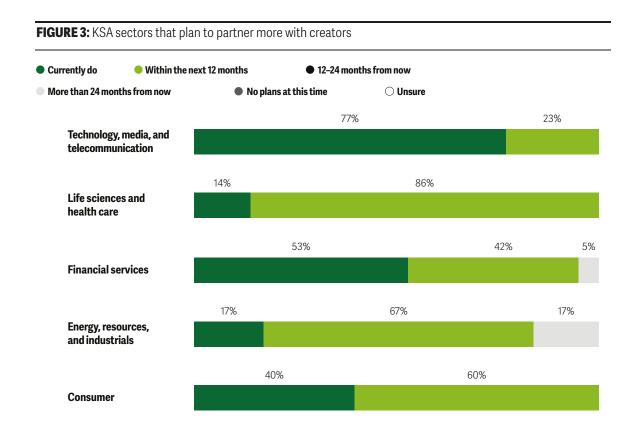

Encouraging risk-taking and providing room for failure can encourage creative thought. But encouraging your organization toward more creative risk-taking may require effective leadership. From an international perspective take the example of Tasha Boone, assistant director of communications at the US Census Bureau, who considers creativity essential to delivering on the bureau's vision. For Boone, this means connecting functions and ideas into a single, unified strategy while giving individual employees the freedom to express themselves within this strategy.⁶

It is this type of combination of individual creative thought with cross-functional collaboration that can lead to the type of transformative change that drives growth.

Beyond the organization

We are living in an era of cocreation. Creative collaboration does not need to reside only within the four walls of the organization. External creative partners can care just as deeply about a brand and may come across as more authentic to consumers than the brand itself. Some of these potential partners, namely creators and influencers, have large social followings and are actively looking for brands to work with. The brands that are willing to share their voice with select others are the ones that could potentially generate a stronger brand community.

Thus, it may not be a surprise that CMOs across all sectors are increasingly exploring partnerships with creators if they haven't already done so. In our survey, we found globally that use of creator partnerships is expected to approximately double in the next year, with particularly notable increases in sectors that don't normally consider such partnerships: life sciences and health care, and energy, resources, and industrials (figure 3).

Source: 2023 Deloitte Global Marketing Trends executive survey, conducted in June 2022.

Deloitte Insights | deloitte.com/insights

In this regard, Saudi Arabia is ahead of the global benchmarks with industries such as TMT, Financial services and consumer industries already utilizing creator partnerships. Other industries within KSA expected to follow this within the next 12 months.

While paying a creator to feature a brand in a post is an obvious way to engage, it is not a comprehensive creative strategy. Many brands are finding that creators can be a natural extension of the strategic development team. When asked to rate the ease of conducting several aspects of the brand/creator partnership, globally nearly four out of five (78%) respondents indicate it is easy or very easy to collaborate with creators on creative strategy—the highest percentage of any aspect.⁷

Research from Deloitte's CMO Program shows that creators are also looking for mutually beneficial collaborations that help them grow alongside the brands they work with.⁸ However, more than half of surveyed creators (58%) report difficulties securing partnerships with brands. Considering the difficulties from the creator perspective, and the fact that our executive survey showed that fewer than one-third of brands (32%) are currently partnering with creators, there seems to be a disconnect between the two sides of the partnership.

The brands that are willing to share their voice with select others are the ones that could potentially generate a stronger brand community.

Here are a few ways brands might better include creators as strategic partners in creativity and growth plans:

- Allow for creative freedom. Almost by definition, creators are considered accomplished at generating information in a way that engages a core audience. Giving creators the freedom to express their abilities with minimal interference can not only lead to more appealing content but also helps maintain the authentic voice that is vitally important to creators and consumers. In the words of Bree Sandlin, vice president of lubricants marketing at Shell: "It's a little scary as a brand manager to know that you're releasing that control. But it's telling our brand story in a way that we could never do with a level of authenticity and credibility that consumers need."9
- Build a partnership based on relevance. Just as businesses are likely seeking creators who are on the same social platforms as the company's target audience and who portray an image that's compatible with the brand, creators, as the sole representatives of their own brands, are likely looking for company partners that are relevant to the creator's audience. In our survey of 400 creators, nearly seven in 10 (69%) indicated that the top priority when deciding whether to partner with a business was "relevance of brand to my audience"—a higher priority than even monetary value of a partnership.¹⁰ A strong partnership may include plans for how content can be reinforced in a way that leads to growth for both brand and creator.
- Align on expectations. Creators surveyed indicated clear expectations are important to forming an ideal partnership with companies. When contract terms plainly define how creators are evaluated, amplified, and paid, brands do not need to overthink how they define a successful partnership. Among brands that partner with creators, the top two ways of measuring the success of those partnerships among those surveyed are "increased engagement on brand channels" (58% of executives) and "revenue growth" (57% of executives).11

■ 01 02 03 04

Like every aspect of modern creativity, creator partnerships are likely to be effective when integrated into the larger creative strategy rather than as a solitary campaign. Connecting formerly disparate stakeholders, functions, and ideas into a concerted effort to infuse creative thought across the organization (and beyond) may seem like a daunting task. Yet, with a combination of customer knowledge and business acumen, CMOs are well positioned to lead this transformation and potentially uncover new sources of growth.

Which new technologies most interest marketing leaders this year—and which are likely to sustain their interest over the long term?

Striking the right balance between hype and investment is one part art and one part science for chief marketing officers (CMOs). It's impossible to ignore trends that everyone is talking about, but unwise to overinvest in unproven technology. Still, marketers should always be prepared for emerging technologies that can suddenly create significant competitive advantage.

The CMO has the potential to determine how these trends become relevant to their customers. They can consider, "How can this transform my business or sector?" This year, our data suggests Web3 technologies are of growing interest for marketers, as they offer significant promise to brands.

Growing interest in the metaverse

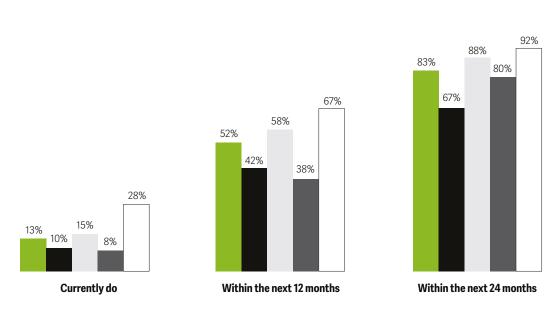

The metaverse is a confluence of technologies that allow new forms of experience and engagement across industries through 3D activity and the use of simulations based on artificial intelligence. Interest in the metaverse is growing rapidly, with many brands expecting to use the metaverse to link the physical and virtual worlds over the next one to two years. In Saudi Arabia for example, nearly all (90%) of company leaders believe the metaverse will either be very important or important for their brand strategy over the next two years. While more business-to-consumer industries have been getting a jump on developing a metaverse strategy, our survey of 1,015 marketing executives shows

that even industries such as energy, resources, and industrials (ER&I) and life sciences and health care (LS&HC) are gravitating toward the metaverse, indicating that it is likely a compelling issue across sectors (figure 1). At this early stage, brands may be unsure how quickly to rush to market, so they should assess and define clear objectives for how their organization will create experiences in the metaverse. In particular, brands that wish to be leaders in the virtual space should consider laying the groundwork for joining the sphere of unlimited reality.

The top reason brands gave for not already engaging in the metaverse is that they face difficulty with developing or implementing the technology (45% of respondents), issues that can be caused by limitations in skill sets, talent, or budget. LS&HC respondents reported even higher rates of concern (55%) that technology implementation is a serious barrier.

Source: 2023 Deloitte Global Marketing Trends executive survey, conducted in June 2022.

Globally, the data suggests, however, that implementation barriers are not enough to dampen interest in the metaverse. Only 10% of respondents said the metaverse is "not relevant for my industry." ER&I sector respondents are the most likely to believe it's not relevant to their industry, with 24% of respondents seeing it as irrelevant. Still, these numbers suggest that broad adoption of these new technologies is likely on the horizon.

Marketing executives that we interviewed also noted that a path toward metaverse adoption is not yet clear cut. There remain questions about which metaverse platform to join based on where customers are most likely to end up. Some brands reported tentatively exploring existing spaces, while others reported considering developing their own.

Other brands recognize the value of the metaverse but are taking a slower approach to accommodate other competing priorities. Ömer Barbaros Yis, CEO of LC Waikiki E-Commerce Business, a European fashion retailer, says, "I deeply believe that the metaverse and all the immersive experiences—let's say metaverse or virtual reality, augmented reality, mixed reality, and all that stuff— have that tremendous potential in e-commerce as well, making experiences more immersive for customers before they buy, to try them out." However, he also notes, "[The metaverse] is not my [top] priority, [because] when people have struggled with prices, with economics, when they have even struggled to pay for energy, they care more about affordability [of the metaverse]."3 Instead, he plans to keep working on a longer-term road map for adoption of up-and-coming technologies in years to come.

"I deeply believe that the metaverse and all the immersive experiences have that tremendous potential in e-commerce as well, making experiences more immersive for customers before they buy, to try them out."

—Ömer Barbaros Yis, chief executive officer, LC Waikiki E-Commerce Business Saudamini Dubey, Partner, Emerging Tech & Innovation Leader, Deloitte Middle East says: "Today we stand at the cusp of change, an opportunity to create a whole new world together. But we need to be prepared to do it in a responsible way by keeping key considerations in mind, including security, privacy, accessibility, and inclusive design that will help bring a trustworthy metaverse to life".

Therefore, brands across industries should start to consider the role the metaverse might play in their marketing strategy in the medium to long term. In the coming year, based on our fieldwork with CMOs, we recommend:

- Look before you leap. Define your objectives
 for creating metaverse experiences and keep
 an eye on early adopters who will pave the
 way for broader adoption in 2024 and beyond.
 Make sure to consider potential challenges
 including cybersecurity, trust, brand
 reputation, and digital rights management.
- Weigh brand priorities in developing your adoption strategies. Our data shows that companies are still prioritizing investment in technology platforms and capabilities to support personalization and achieve customer-centricity as a top priority, but brands that fail to create a strategy for joining the metaverse may lose the opportunity to become a leader in the space.

 Start laying the groundwork for a metaverse strategy. The metaverse offers CMOs across industries new opportunities to expand engagement and experience and to grow new revenue channels. Marketers that fail to set a strategy early may find themselves playing catch-up for years to come.

Blockchain technology makes gains in regulatory environments

While blockchain's use in marketing is still nascent, pressure to address privacy issues may be fueling early adoption. Of the CMOs who say addressing the regulatory environment is their top priority, 35% have already implemented blockchain in their advertising strategy, technology compared with 21% of all other respondents (figure 2). This is because, particularly in regulatory environments, blockchain offers new possibilities for strengthening consumer privacy and allowing consumers to control their own data. For example, blockchain offers innovative possibilities for the health care sector, which can use the technology to store, share, and utilize data to communicate with patients without sharing data with a third party.

FIGURE 2: Brands that are addressing increased regulation are adopting blockchain at significantly higher rates than their peers

Source: 2023 Deloitte Global Marketing Trends executive survey, conducted in June 2022.

Locally in Saudi Arabia, more than one-third (38%) of company leaders surveyed say their company is currently supporting their advertising strategy with blockchain technologies. An additional 58% plan to start utilizing it over the next 2 years. These data points indicate a larger shift toward the nascent technology in the coming year. Tellenbach says that Moser is implementing the use of blockchain because it offers the promise of solving specific needs within the watch market: tracking and authenticating products over their lifespan and ensuring service follow-ups even if they are sold or traded on the secondhand market.⁴

Different industries will likely need to adopt different, more localized approaches to these technologies that carefully prioritize the needs of their customers with the existing resources the brands have. Our results show that brands working in regulatory environments should probably consider a strategy for blockchain in the coming year for the data privacy reasons mentioned above. Other industries, on the other hand, can keep a close eye on digital currency leaders to start laying the groundwork for broader blockchain adoption in the coming years. Less regulated industries will likewise have the opportunity to build consumer trust, as well as to provide a more customized, direct consumer experience.
