

Using Science to Improve the Art of Relationships

Have you ever pondered what makes people click or clash? Why some groups excel and others fumble? How leaders can make or break team potential? Business Chemistry® can provide the answers. Based on extensive research and analytics, plus years of proven success in the field, the Business Chemistry framework provides a simple yet powerful way to identify meaningful differences between people's working styles.

Expressly designed for use in a business context, Business Chemistry can help you grasp where others are coming from, appreciate the value they bring, and determine what they need in order to excel. It is used by hundreds of thousands of professionals around the world to build stronger relationships, increase team performance, and create exceptional organisations.

FOCUSED ON INTERACTION, NOT INTROSPECTION

Business Chemistry goes beyond helping you understand yourself. It is designed to help you recognise the preferences and working styles of others. It can guide you to quickly identify someone's working style, understand how it's different from or similar to your own, and then act on that knowledge by flexing your communication style to build stronger relationships.

ROOTED IN SCIENCE, DESIGNED FOR BUSINESS

Working with scientists, we studied the behaviours, preferences, and traits with the most potential to affect working relationships. Then, we adapted statistical models and performed in-depth analysis to create a sophisticated analytics-driven tool with easy-to-learn, practical applications for harnessing the power of diverse perspectives.

PERSONALISED INDIVIDUAL AND TEAM INSIGHTS

Business Chemistry sheds light on team dynamics by highlighting the unique aspects of each individual while also considering the composition of the group as a whole. Analysis of the team's composition provides perspective on relative strengths and areas of misalignment to understand how to best employ each individual's natural tendencies, while leveraging the overall group makeup to achieve goals.

RESEARCH THAT FUELS SUCCESS

Drawing upon extensive research and thousands of interactions with executives in the Deloitte Greenhouse®, we continue to develop insights into how to create the kind of chemistry that fuels success. Our studies reveal how Business Chemistry relates to responses to stress, psychological safety, locus of control, career aspirations, recognition preferences and priorities, and the conditions under which working styles thrive.

Business Chemistry Facilitated Sessions

DETERMINE YOUR OWN BUSINESS CHEMISTRY TYPE

Spend 10 minutes completing an online assessment to get a detailed report about your working style
