

Dataiku

Tackling AI governance and risk management with the AI toolbox for coders and non-coders.

Dataiku lets **technical and non-technical team** members **collaborate** in the **same environment**. Users with no data science background can **experiment** with **AI use cases** via a low-code/no-code user interface. Deploying AI at scale means contending with risks and meeting regulatory requirements. Dataiku helps tackle the dynamic regulatory environment by managing and documenting each model's development, deployment, and operation steps. This reduces **technology bottlenecks**, **democratizes innovation**, and **establishes governance**.

Dataiku Use Cases

Watch the 3-Minute Dataiku Demo

Dataiku can be leveraged as a software layer in your own cloud. But for teams or organizations looking for a fully managed option, [Dataiku Cloud](#) is built for the modern data stack — managed, serverless, and low technical expertise required when it comes to maintenance (administration and upgrades).

Use Case Spotlight

Using Dataiku to Tackle Changing Pension Regulations

In the Netherlands, changes in the regulatory landscape require pension funds to be [audit-ready](#) from 2024. Accomplishing this will mean creating, sorting, and analyzing mountains of documentation that will also require data visualization. While usually this would mean hours of manual work, by using Dataiku, Deloitte can speed up the process, through AI.

With Deloitte and Dataiku, AI development can become standardized and democratized, documentation becomes automated, models are visualized in a user-friendly way, and stakeholders can work together in a seamless environment, according to their capabilities, to identify and manage risks.

Let's make things happen, **together.**

See how Deloitte with Dataiku can help you scale AI and analytics programs and drive business outcomes.

Why Deloitte & Dataiku

Helping better serve clients on their path to a modern data environment

Cross-domain expertise with global capacity

With more than 160 certified Dataiku practitioners globally, Deloitte can create new platforms, transform processes, train the workforce, and identify value-driving AI use cases.

Leader in AI risk management and governance

Deloitte works with some of the largest organizations in the world to develop risk management, legal, regulatory, and MLOps processes that support compliance at scale.

An ecosystem of capabilities

With an ecosystem of vendor alliances to deliver the ideal tools for your enterprise goals, particularly in the modern cloud data warehouse space, we know where Dataiku sits in your technology stack, how to maximize its use and value, and how it complements other technologies as part of your data modernization initiatives.

Trusted partner in technology department

We can lead Dataiku training for lines of business users while also supporting smooth implementation that caters to business leaders and technologists alike.
