

JDE support+

Enhancing the value of sustainment
with a view to the future

#OperatewithDeloitte

Enterprise resource planning (ERP) providers are making significant investments in modernizing cloud applications and app programs over the next decade, however, many companies are not ready to make this investment and are happy with their current ERP platform.

If your company is the latter and is content with their existing ERP, it is imperative to consider the longer-term implications of maintaining legacy technology and extending its lifespan. One of the biggest considerations is planning operation ability with a retiring talent pool, lack of access to innovation such as GenAI and a scarcity of experienced resources available to support legacy technology.

#1

Deloitte is Oracle's leading systems integration partner

For companies who rely on JDE as their (ERP) system to manage their finance, supply chain, manufacturing or other business operations, and a management team who typically takes a hands-off approach so long as the system is working. But for those who are still relying on the approach "if it isn't broken, don't fix it" approach may not be viable for much longer.

We think there's a better way. By focusing on the long-term operation health and performance of JDE, we will help reduce risk and costs while improving your business performance and giving your team the JDE experience, they deserve. This includes leveraging an inventory of innovation built to complement JDE processes, such as GenAI solutions running on OCI (Oracle Cloud Infrastructure) powered by Nvidia and Cohere. Supported by our strong alliance network, we are well positioned to drive these enhancements. At the same time, we are investigating opportunities to prepare the JDE platform for future migration to a Cloud ERP, such as data simplification, security model refresh and removal of customized process to mimic best practices. This will reduce the risk and impact of the future ERP migration, while still prioritizing current business operations.

With access to a global network of JDE professionals and as one of Oracle's leading global application service providers, we can run your JDE environment for you by unlocking your team's capacity, provide a sustainment model to reduce costs and increase adaptability, driving your team's growth, and helping you prepare for your transformation journey as per your schedule.

25+

Years of experience with Oracle

Years of collaboration and success!

We're proud to help you:

Run JDE: take ownership for the support of your legacy JDE platform and free up the capacity needed for your team to upskill, address foundational issues, and prepare for the planning and execution of a successful cloud migration.

Refine existing processes and recommend the industry best practices to streamline your system functions, including review of security model and data for proactive measures to increase value of the existing business processes while preparing for a future move to Cloud ERP.

Implement GenAI solutions built to consume data from JDE and enhance existing business processes, such as Month-end Close.

Roadmap ERP cloud modernization: We'll leverage our proven cloud migration methodology and work with you to prepare a Cloud ERP roadmap, focusing on the changes that best meet your current business priorities. We'll tailor our approach to the urgency of your needs, availability of resources, and ability to adopt change.

Sustainment model: We will use our proven Operate methodology to stabilize the application and work with you to drive continuous improvements and innovations, including analytics and automation.
