Step 1
Risk definition
Our industry SMEs work with your organization to identify risk categories

Step 2
Model training
A human team trains the NLP model by mining and tagging high-risk content

Step 3
Data streaming
Digital media sources are streamed and aggregated into a single data warehouse

Step 4
Risk tagging
NLP models monitor data stream to tag potential risks implied by ingested content

Step 5
Analytic & alerts
Alerts are automatically generated when chatter around risk categories increase

Step 6
User feedback
Your team can reject inaccurate results to teach the model to tag more accurately

Step 7
Actionable insights
Supervisors have access to a wealth of data to generate action items that mitigate risk
