TRANSFORMING MANAGEMENT OF IT AND DATA PORTFOLIOS

Strategic Portfolio Management solution that provides an innovative approach to governance for stakeholders at all levels through improved visibility into – and more effective management of – IT and data investments and assets.

GovConnect's Enterprise Portfolio Management Experience (EPMx) is a ServiceNow Strategic Portfolio Management-based solution that supports IT and data governance across an organization. This solution provides key stakeholders with a clear, easy-to-navigate process and offers leaders a simplified approach to enterprise strategic portfolio management (SPM) for IT and data projects throughout the technology lifecycle.

Solution Features

Strategic Planning

Enables organizations to drive innovation and transformation by aligning IT projects with strategic objectives and offering transparency into the portfolio's performance.

Project Profile

A consolidated investment profile that provides submitters with a clear roadmap for executing each step of the governance process and viewing approval outcomes.

GenAI Chatbot

Generative AI chatbot provides users with conversational responses to questions about the governance process, existing concepts, and solution development standards.

Federal Policy Alignment

The solution is tailored to capture key information for compliance with:

- Clinger-Cohen Act
- OMB Circular A-11 and A-130
- TBM Taxonomy
- IT Modernization

Project & Portfolio Management

Holistic view of all IT and data projects across the enterprise, with the ability to track progress across the lifecycle using advanced analytics and dashboard capabilities.

AI-Driven Portfolio Review

By leveraging Natural Language Processing (NLP), the solution deciphers, connects, and merges portfolio data to generate a list of ideas or projects matching submitted concept criteria to foster collaboration and minimize duplicative efforts.

Knowledge Management

A robust knowledge portal to easily locate guidance document, templates, reference architectures, and other key resources needed to navigate the governance process.

Governance Board Workbench

Enables a virtual workbench to support board management, including scheduling meetings, generating agendas, and view and record meeting notes.

LEARN HOW WE CAN HELP:
Global ServiceNow alliance website

Benefits

Comprehensive Oversight: Track IT and data projects across the lifecycle, from ideation to completion, on a single platform

Discover Portfolio Insights: Conduct transparent and standardized assessments of your enterprise system inventory

Enhanced Resource Management: Improve fiscal stewardship by fostering collaboration and reducing duplication in your portfolio

Mission-driven Decision-making: Advance your organization's mission, goals, and objectives by leveraging accurate data to inform decisions and strategy
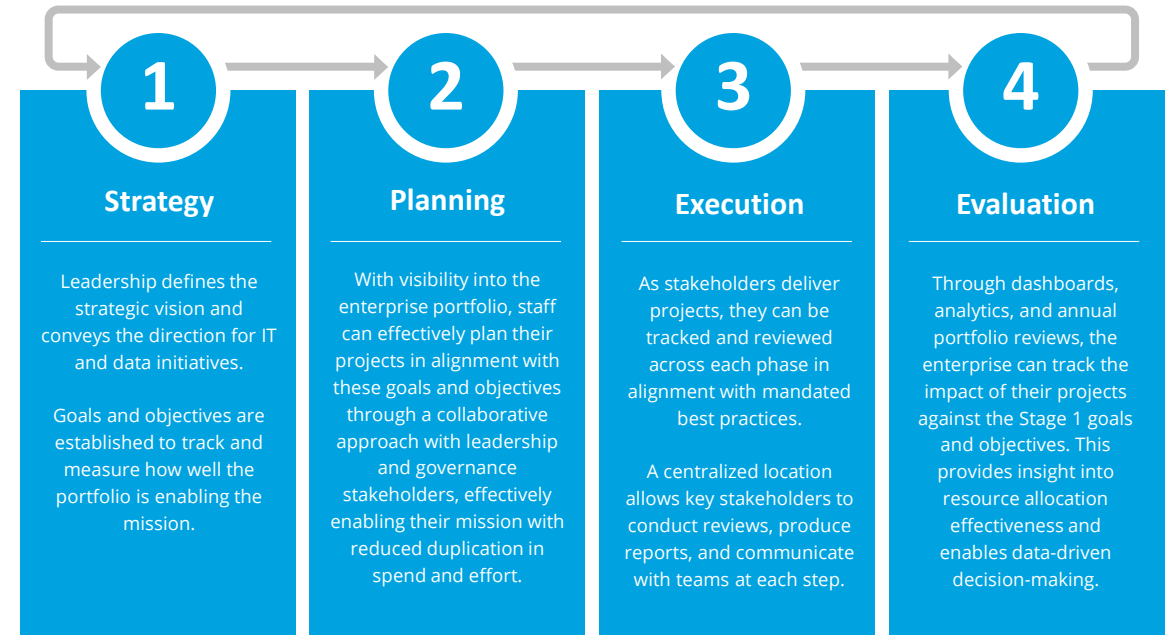

Accelerated Governance: Reduce the time needed for IT and data governance reviews with streamlined processes and AI-enabled reviews

Effortless Compliance: Drive adherence to Federal and enterprise IT and data mandates with automated data collection and reporting

Portfolio Management Enabled Lifecycle

1 Strategy

Leadership defines the strategic vision and conveys the direction for IT and data initiatives.

Goals and objectives are established to track and measure how well the portfolio is enabling the mission.

2 Planning

With visibility into the enterprise portfolio, staff can effectively plan their projects in alignment with these goals and objectives through a collaborative approach with leadership and governance stakeholders, effectively enabling their mission with reduced duplication in spend and effort.

3 Execution

As stakeholders deliver projects, they can be tracked and reviewed across each phase in alignment with mandated best practices.

A centralized location allows key stakeholders to conduct reviews, produce reports, and communicate with teams at each step.

4 Evaluation

Through dashboards, analytics, and annual portfolio reviews, the enterprise can track the impact of their projects against the Stage 1 goals and objectives. This provides insight into resource allocation effectiveness and enables data-driven decision-making.

When fully realized, the Enterprise Portfolio Management Experience (EPMx) will streamline the management of the entire enterprise IT and data project lifecycle, from investment review and acquisition planning to portfolio management and reporting. By establishing a centralized hub for IT and data project governance, we can enhance financial stewardship and deliver a unified vision that inspires active engagement from stakeholders at all levels.
