DELOITTE AND CISCO: *NETWORK AS A SERVICE*

Replace fragmented infrastructure with an AI-ready, resilient, scalable, and secure network model

Organizations are under pressure to support cloud and AI adoption, hybrid work, distributed operations, and rising security demands while managing aging infrastructure and growing operational complexity. Traditional network models can be costly to refresh, difficult to scale, and hard to align with the changing business needs.

Deloitte's Network as a Service (NaaS) helps organizations modernize through a consumption-based model that combines underlying network and infrastructure technology from Cisco with Deloitte services across strategy, deployment, operations, monitoring, security, and lifecycle management. The potential result is a resilient, scalable AI-ready network foundation with more predictable costs and fewer IT demands.

Who can benefit most?

Deloitte NaaS is ideal for organizations that:

- Operate in industries where geographic dispersion and critical uptime make network performance and resilience essential
- Need to modernize aging or fragmented network infrastructure across campuses, branches, field locations, or distributed sites
- Seek more cost-effective scale, agility, and flexibility
- Include IT managers and network architects looking for simplified management, automation, and operational consistency
- Involve procurement teams focused on shifting from CapEx to OpEx and reducing vendor, asset, and lifecycle complexity

If your organization is balancing modernization demands with uptime expectations, operational complexity, and cost pressure, Deloitte NaaS is built to help.

A roadmap for network modernization

By combining Cisco's technology with Deloitte's network engineering, cyber, and managed services capabilities, NaaS helps organizations evolve their network through a more integrated service model. NaaS allows enterprises to subscribe to a complete package of network connectivity, management, monitoring, and security as an ongoing service, rather than purchasing and maintaining their own hardware.

The solution includes:

- **Strategy, architecture, and design** aligned to business priorities, technical requirements, and security objectives
- **Deployment and engineering services** across campus, branch, remote and distributed environments
- **Ongoing operations, monitoring, and optimization** to help improve performance, availability, and user experience backed by service-level agreements
- **Integrated security services** supported by proactive upgrades, policy enforcement, and zero trust-aligned operations
- **Lifecycle, asset, and connectivity management** including inventory tracking, fulfillment, capacity planning, carrier coordination, and secure disposal
- **Predictable consumption-based delivery** designed to reduce overhead, improve adaptability, and support long-term transformation

Potential benefits

NETWORK MODERNIZATION	Move from aging, fragmented infrastructure to a more integrated network model. Deloitte NaaS helps simplify and modernize the network through a scalable, cloud-enabled approach.
RESILIENCE AND SECURITY	Improve uptime, visibility, and security through proactive monitoring, lifecycle management, and embedded security. Deloitte NaaS helps reduce operational risk while supporting more reliable network performance.
AGILITY AT SCALE	Support hybrid work, cloud adoption, new site rollouts, and changing business demand with a network model designed to adapt. Organizations can expand faster without adding unnecessary operational burden and with minimal disruption. Future capacity considerations are also captured in initial design and deployment.
FLEXIBLE CONSUMPTION	Shift from capital-intensive refresh cycles to a subscription-based model with more predictable spend. This can help align network investment to business demand while simplifying ownership.
STRATEGIC BUSINESS VALUE	Free internal IT teams from day-to-day network demands so they can focus on higher-value priorities and outcomes. Deloitte NaaS helps create a stronger foundation for transformation, resilience, and long-term growth.
STAFFING AND KNOWLEDGE TRANSFER	Reduce dependency on hard-to-retain network talent. Deloitte NaaS helps mitigate the operational risk of IT attrition by providing a fully managed service backed by defined service levels, giving your organization greater continuity, predictability, and confidence.
ACCELERATED DEPLOYMENT MODEL	Modernize faster with less disruption. Deloitte NaaS delivers rapid deployment of a fully managed network through a milestone-driven approach designed for predictable execution and minimal impact on day-to-day operations.

The Deloitte difference

Converged capabilities
We combine network, cloud, and, cyber capabilities to help clients modernize with performance and security in mind.

Scale to deliver
With more than 20,000 data center, infrastructure, and cloud professionals globally, and over 1,000 Cisco-certified resources, Deloitte brings the depth required for complex transformation.

Deep alliance with Cisco
Deloitte and Cisco share over 20 years of strategic collaboration, combining leading technology with experience across strategy, implementation, security, and managed services.

GET STARTED

By integrating technology, operations, security, and network asset lifecycle services into one model, Deloitte NaaS helps organizations transform legacy infrastructure into a more reliable, adaptive platform. The result: a network that aligns to business priorities.
