Client Success Story

Personalized AI Tutoring at a Large Public University in California

Client

A large public university serving a diverse student population in the heart of Silicon Valley. As enrollment continued to grow, the university sought new ways to deliver scalable, personalized academic support to students while helping faculty better understand and respond to learning needs.

Issue

The university faced increasing demand for individualized tutoring and academic support across a large student body. Traditional support models were difficult to scale without compromising quality or overextending faculty and staff. The university needed a solution that could provide timely, personalized guidance to thousands of students while also giving faculty actionable insights to support earlier interventions.

Approach

Deploying Scalable AI Tutoring

Deloitte partnered with the university to design and deploy an AI-powered tutoring platform designed to provide students with real-time, adaptive learning support.

Enabling Personalized Learning

The AI-powered platform was designed to deliver tailored feedback to students based on their individual learning needs, helping create a more personalized and responsive academic experience at scale.

Equipping Faculty with Actionable Insights

Deloitte also enabled faculty-facing analytics to help instructors identify student needs, monitor learning patterns, and support timely academic interventions.

Impact

The platform helped the university expand access to personalized tutoring support across a large public institution. Faculty were equipped with actionable analytics to improve efficiency and better target student support. The effort improved student outcomes and established a replicable model for AI-enabled education innovation.
