## **Deloitte.**

# servicenow.

Designed and built on the ServiceNow platform, Deloitte's Federal Continuous Authorization & Monitoring (FCAM) is a ready-to-deploy solution for government agencies that automates The National Institute of Standards and Technology Risk Management Framework (NIST RMF), provides flexible/automated control inheritance, and the ability to integrate with existing vulnerability scanners which provides automated POA&M creation.

#### Challenge

US Government agencies need an automated authorization and monitoring solution that can adapt to the changing cyber landscape.

Legacy approaches to NIST RMF and assessment and authorization (A&A) are unable to catch up to modernized Continuous Monitoring.

Most Governance, Risk and Compliance/IT Service Management (GRC/ITSM) platforms don't allow for flexible customizations around control inheritance.

Many federal agencies need assistance in modernizing their approach to RMF and Continuous Authorization & Monitoring.

#### Solution

Deloitte has created a solution powered by ServiceNow that streamlines the NIST RMF, enables automated Continuous Monitoring of security posture, and permits dynamic control allocation of authorization boundaries.

Built a customized control inheritance process to cover all control allocation scenarios.

Risk questionnaire helps to automate and streamline control inheritance and configuration.

Automate the RMF process and associated tasks, reducing risk and costs while decreasing the time and effort involved in authorizing and developing a Plan of Action & Milestones (POA&M) for a given system.

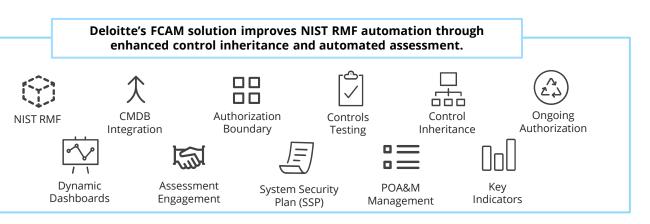

#### **Potential Benefits**

**Streamlining of NIST RMF** gives agencies visibility into step-by-step Authorization To Operate (ATO) process and control management lifecycle.

Designed to help organizations meet the new FedRAMP's continuous authorization to operate (**cATO**) requirements through POA&Ms automation.

Achieve continuous monitoring of the organization's assets by tying significant asset, vulnerability, and incident data into system authorization boundaries via **integration** with Deloitte's <u>Federal Incident & Breach Response</u> and <u>Federal Vulnerability Management</u> solutions and assist with ongoing authorization.

**Dynamic configuration** capabilities for authorization boundaries by filtering ServiceNow's Configuration Management Database (CMDB).
