

Reimagining modern third-party risk management (TPRM)

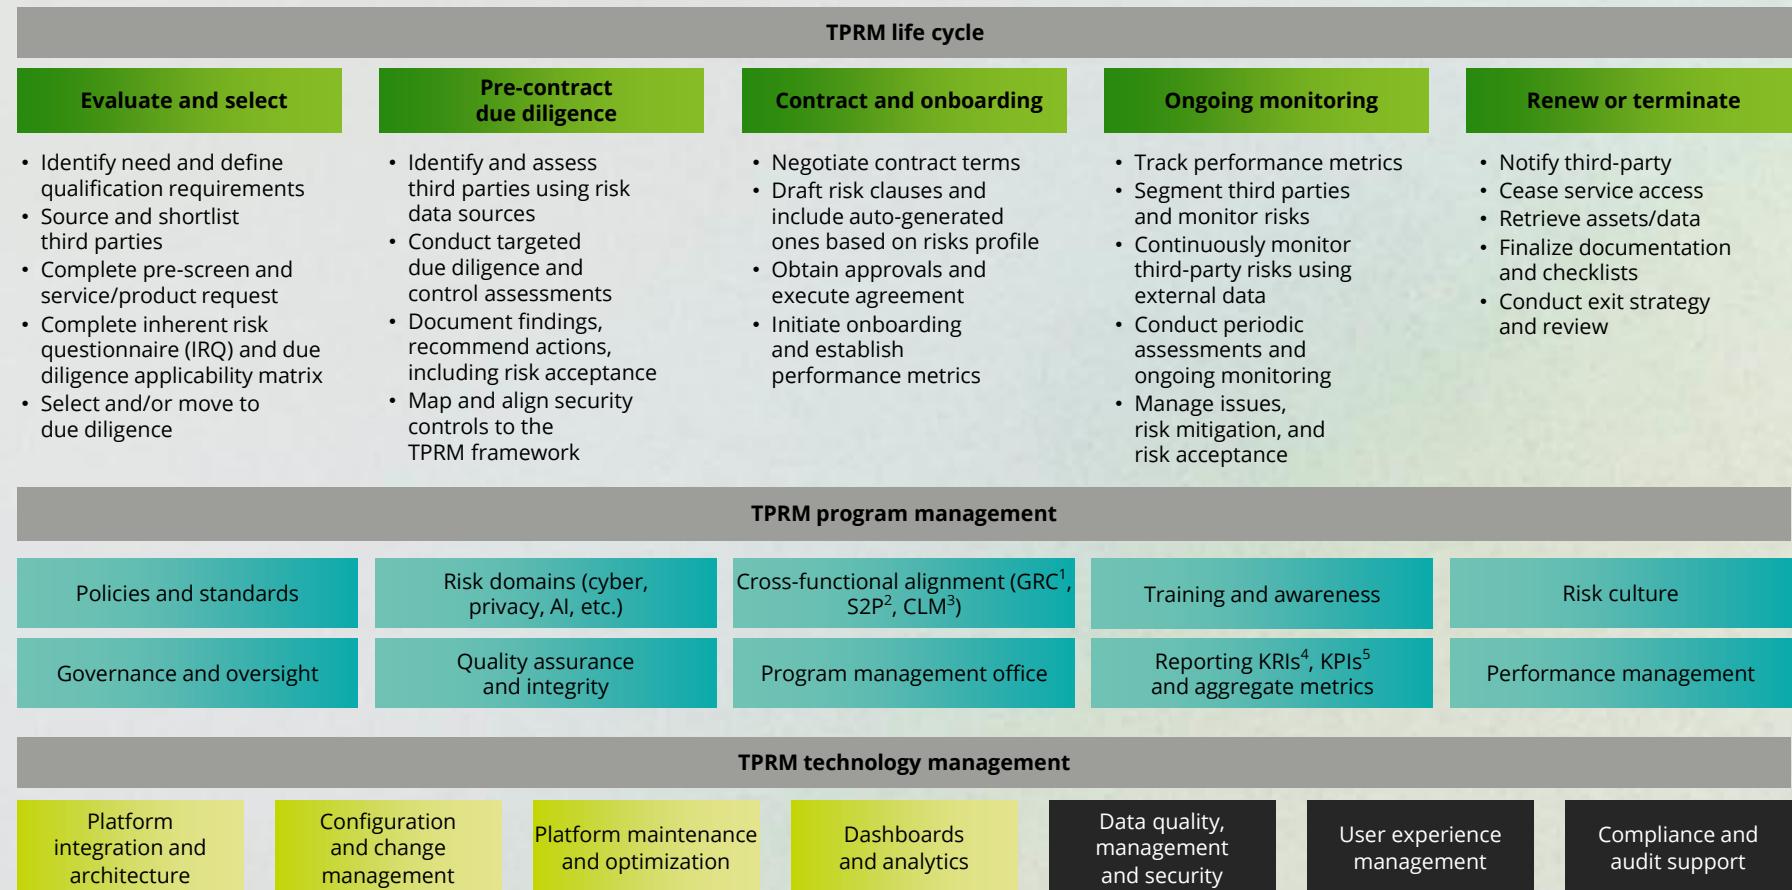

Rapid tech evolution and new business needs are driving a reimagining of the TPRM function. In pursuit of efficiency gains, organizations are prioritizing artificial intelligence (AI) investments in components of their TPRM programs.

The future of TPRM is being shaped by the integration of advanced technologies, particularly AI. Organizations are prioritizing AI-enabled solutions in TPRM—such as smart alerts for risk prioritization, dynamic risk assessments, and predictive analytics dashboards—with the intention of improving compliance, risk management, loss avoidance, and supply chain efficiency, including effective integration with legacy systems.

These innovations can also introduce challenges such as heightened data privacy concerns, new cyber risks, and the potential for bias and ethical issues. Addressing these challenges will be critical as organizations aim to realize the potential benefits of AI-enabled TPRM.

Current map of the TPRM function and underlying life cycle, services, and processes

A blueprint for an AI-powered future: This model represents the TPRM function, along with the foundational services and processes that form the baseline for reimagining and transitioning to an AI-driven approach. It illustrates how people, processes, and technology are integrated within the TPRM function. The legend below identifies the new and evolved AI-enhanced services.

LEGEND

TPRM-specific AI uplift (partial + SME input)

Deloitte Ascend™ for Cyber (primarily applies to broader tech and program management)

Partial AI uplift and SME input

TPRM core capabilities (tech vendors AI uplift)

AI for TPRM: Functional uplifts to achieve greater efficiency

Explore how harnessing AI and smarter solutions can reduce manual effort and accelerate results across key functions.

Process/function	Uplift approach	Potential resulting impact
Evaluate and select	Agent-assisted vendor inventories onboarding, services categorization, risk assessment, using data to inform risk scores and future contracts	<ul style="list-style-type: none"> Adequate information Reduce errors and duplications
Pre-contract due diligence	AI-driven control assessments, evidence reviews, issue management and data correlation	<ul style="list-style-type: none"> Near elimination of questionnaire-led assessment and improve accuracy via dynamic due diligence
Contract and onboard	AI-enabled contract generation based on inherent risk and control assessments, escalations based on deviations to contract requirements	<ul style="list-style-type: none"> Reduce manual mapping and data entry from contracts
Ongoing monitoring	AI-guided continuous risk monitoring, performance management and response planning based on external and internal data	<ul style="list-style-type: none"> Efficient and effective filtration through alerts Relevant risk / threat / event (RTE) alerts
Renewal or termination	AI-guided renewal activities, coordination of termination and contingency plan activities	<ul style="list-style-type: none"> Proficient termination process
Program and technology management	AI-enabled intelligent reporting, smart program helpdesk, data quality, role-based training	<ul style="list-style-type: none"> Improve consistency/efficiency in reporting Near elimination of manual requests/follow up

TPRM for AI: Managing risk across the third-party life cycle

Various activities across the third-party life cycle can be enhanced to better identify, assess, and manage both known and hidden AI usage.
