Cyber Defense & Resilience

Resilience as a Service (RaaS)

Cyber resiliency, reimagined

RaaS is a managed solution to enhance an organization's ability to withstand and rapidly recover from operational disruptions. In an increasingly cyber-dependent world, enhancing operational continuity is critical to building long-term resilience.

RaaS emphasizes a proactive and broad approach to resilience by leveraging integrated technology solutions with Deloitte's Ecosystem and Alliance collaborators.

A cohesive relationship between technology and services is foundational to strengthen resilient architecture design, implementation, and execution.

While traditional resilience is siloed across organizations, RaaS centralizes responsibility for protecting critical business operations.

Market drivers and trends

The reality of today's environment

Cyberattacks are more frequent and far-reaching
Threats do not exist in isolation. There is a cyber life cycle challenge affecting many industries.

Legacy resilience is costly and ineffective
Traditional redundancy and replication strategies can inadvertently propagate modern cyber risks rather than mitigate them, highlighting the need for evolving and more secure solutions.

Organizations often struggle to recover critical technologies
Threat actors target critical infrastructure, including backup technologies that are often ill-equipped for consistent data immutability and rapid recovery.

Increased focus on protecting the business is needed
Lack of a business-centered strategy results in deprioritized investments and fewer resources to mitigate threats.

There is a growing pressure to be 'always on'
Customers and business partners expect services to be "always on," necessitating organizations to improve cyber resiliency practices and technologies to meet these demands.

Resilience efforts are often siloed and lack accountability
As threats grow in frequency and scope, an organization's ability to prepare, respond, and recover hinges on a shared sense of responsibility.

Our Resilience services

Operations

Business continuity and disaster recovery services—such as recovery strategy development, plan documentation, testing, and scenario planning—to help organizations manage disruptions

Business Impact Analysis (BIA)

Industry-leading change-management tactics to align adjacent recovery designs and plans

Third-Party Management

Design and implementation of third-party resiliency strategies, with monitoring services to help organizations manage risks and potential threats

Incident Response

Cyber Incident Readiness, Response, and Recovery (CIR3) methodology to assist organizations with ransomware preparedness, war-game exercises, and design/implementation of a Cyber Recovery Vault

Compliance Reporting

Compliance reporting services with detailed risk reporting and monitoring, advanced key performance/risk indicator tracking, and proactive risk sensing

Do more than defend

Strengthen cyber, strengthen the business. Designed to meet organizations at any point in their journey, our robust cybersecurity services provide your enterprise with the tools and experience needed to rapidly respond to changing markets, new threats, and disruptive competition. With Deloitte's unified cyber approach, your organization won't just adapt to challenges—you'll recognize them as opportunities to build resilience, embrace innovation, and transform your digital future.

DELOITTE CYBER DEFENSE AND RESILIENCE SERVICES

Attack Surface Management

Reduce organizational risk by decreasing time to remediate.

Crisis & Incident Response

End-to-end solutions to help you safeguard trust across your business.

Security Operations

Transform your security operations centers (SOCs) through modernization and threat intelligence programs.

Technology Resilience

Put trust and safety at the heart of your organization's communications and digital products.
