

# OCC - Principles for Climate-Related Financial Risk Management for Large Banks

February 2022

# Background and Context

Although formalized policies on climate risk have been limited in the US to date, regulatory focus has been accelerating, and additional guidelines and policies are expected to emerge. For the scope of this analysis, we have considered recent issuances from the Office of the Comptroller of the Currency (OCC), New York Department of Financial Services (NYDFS), Basel Committee on Banking Supervision (BCBS), and Task Force on Climate-Related Financial Disclosures (TCFD).<sup>\*</sup> The OCC's and BCBS' principles are preliminary and open for public comment until February 14, 2022, and February 16, 2022, respectively. Below is a selected list of recent developments.

<sup>\*</sup>TCFD is an organization setup by the Financial Stability Board (FSB) to provide uniform climate reporting standards.

## Executive Summary

### Purpose

On December 17, 2021, the OCC issued a much-anticipated draft principles that provide a high-level framework guidance for the safe and sound management of exposures to climate-related financial risks.<sup>1</sup>

### Scope of Application

The OCC notes that, “all banks, regardless of size, may have material exposures to climate-related risks,” but that its draft principles are targeted at the largest banks, those with over \$100 billion in total consolidated assets.

The OCC’s climate principles assert that climate-related risk is an increasingly important risk to banks and sets the expectation that banks should be able to effectively manage this risk type. The lack of (or inadequate) risk management in this space has the potential to lead to unsafe and unsound banking practices on a firm-specific level and to financial stability concerns on a broader scale. Of importance to the OCC is the possibility that any negative impact to the banking system will have an unbalanced affect throughout various subsections of the population.

Among the principles, the OCC said that bank boards and senior managers should allocate appropriate resources to climate issues and assign climate-related financial risk responsibilities throughout the organization. Banks should also establish processes to identify, measure, and monitor material climate-related risks using exposure analysis, heat maps, climate risk dashboards, and scenario analysis. The principles further called on banks to consider how climate risks intersect with more well-established risk categories, including credit, liquidity, operational, and litigation risks.

<sup>1</sup> OCC, [Risk Management: Principles for Climate-Related Financial Risk Management for Large Banks; Request for Feedback | OCC \(treas.gov\)](#)

# Key takeaways from the OCC's December 2021 issuance

- **Climate-related risk has the potential to impact banks regardless of size.** If they have not done so already, large banks should begin taking the necessary steps to assess climate-related risk and establish enterprise-wide risk management practices. The OCC expects to tailor future principles to address risk management at smaller banks.
- **Large banks should be mindful of both physical and transition risks** when considering the potential for adverse impact due to climate-related developments. These risk types should be captured in resultant risk management frameworks.
  - **Physical risks** are defined in the principles as, “...the harm to people and property arising from acute, climate-related events, such as hurricanes, wildfires, floods, and heatwaves, and chronic shifts in climate, including higher average temperatures, changes in precipitation patterns, sea level rise, and ocean acidification.”
  - **Transition risks** are defined in the principles as, “...stresses to certain banks or sectors arising from the shifts in policy, consumer and business sentiment, or technologies associated with the changes necessary to limit climate change.”
- **Large banks are expected to assign dedicated resources** to the implementation of the climate risk management framework and the execution of climate-related requirements. The onus is on banks to determine how and where to deploy resources.
- **The OCC will follow these principles with more detailed guidance.** Thus, banks have an important opportunity until February 14, 2022, to provide comment that could potentially help influence the shape of future guidance.
- **In comparison, the OCC's draft principles provide less detail than a similarly focused draft framework set forth by the BCBS.** However, the principles are subject to change based on industry feedback and the final draft may be more detailed or prescriptive.

# OCC Request for feedback on the December 2021 issuance

The OCC seeks feedback on the issues noted below:

## **Applicability**

1. Are there additional categories of banks (i.e., based on asset size, location, business model) to which these principles should apply?

## **Tailoring**

2. How could future guidance assist a bank in developing its climate-related financial risk management practices commensurate to its size, complexity, risk profile, and scope of operations?

## **General**

3. What challenges do banks face in incorporating these principles into their risk management systems? How should the OCC further engage with banks to understand those challenges?

## **Current Risk Management Practices**

4. What specific tools or strategies have banks used to successfully incorporate climate-related financial risks into their risk management frameworks?
5. How do banks determine when climate-related financial risks are material and warrant greater than routine attention by the board and management?
6. What time horizon do banks consider relevant when identifying and assessing the materiality of climate-related financial risks?
7. What, if any, specific products, practices, and strategies—for example, insurance or derivatives contracts or other capital market instruments—do banks use to hedge, transfer, or mitigate climate-related financial risks?

# OCC Request for feedback on the December 2021 issuance

The OCC seeks feedback on the issues noted below:

## **Current Risk Management Practices (continued)**

8. What, if any, climate-related financial products or services—for example, “green bonds,” derivatives, dedicated investment funds, or other instruments that take climate-related considerations into account—do banks offer to clients and customers?<sup>4</sup> What risks, if any, do these products or services pose?
9. How do banks currently consider the impacts of climate-related financial risk mitigation strategies and financial products on households and communities, specifically LMI and other disadvantaged communities?

## **Data, Disclosures, and Reporting**

10. What, if any, specific climate-related data, metrics, tools, and models from borrowers and other counterparties do banks need to identify, measure, monitor, and control their own climate-related financial risks? How do banks currently obtain this information? What gaps and other concerns are there with respect to these data, metrics, tools, or models?
11. How could existing regulatory reporting requirements be augmented to better capture banks’ exposure to climate-related financial risks?

## **Scenario Analysis**

12. Scenario analysis is an important component of climate risk management that requires assumptions about plausible future states of the world. How do banks use climate scenario models, analysis, or tools and what challenges do they face?
13. What factors are most salient for the OCC to consider when designing and executing scenario analysis exercises?

<b>Objectives/Considerations in Scenario Analysis Framework</b> – Regulators have mentioned certain objectives that should be included in Scenario Analysis Framework	+++	+++	+++	+++

Themes	OCC	BCBS	NYDFS	TCFD
<b>Scenario Analysis</b>	<p><b><u>Responsibilities of the board and management</u></b> The scenario analysis</p> <ul style="list-style-type: none"> <li>✓ should be subjected to oversight, validation, and quality control standards that would be aligned to risk of the banks.</li> <li>✓ should be communicated clearly and regularly to all relevant stakeholders within the bank.</li> </ul> <p><b><u>Responsibilities of management</u></b> Develop and implement climate-related scenario analysis frameworks, which are commensurate to the bank's size, complexity, business, and risk profile. The frameworks should include clearly defined objectives which could include:</p> <ul style="list-style-type: none"> <li>✓ exploring the impacts of climate-related risks on the bank's strategy and business model;</li> <li>✓ identifying and measuring vulnerability to relevant climate-related risk factors including physical and transition risks; and</li> <li>✓ estimating climate-related exposures and potential losses across a range of plausible scenarios.</li> </ul>	<p><b><u>Responsibilities of the board and management</u></b> Utilize scenario analysis to assess the resilience of their business models and strategies towards plausible climate-related scenarios. Ensure scenario analysis objective aligns to bank's (1) overall climate risk management objectives; (2) Size, business model and complexity. Scenario analysis should employ a range of time horizons, from short to long-term, in order to target different risk management objectives. The scenario analysis objectives should include:</p> <ol style="list-style-type: none"> <li>exploring the impacts of climate change and the transition to a low-carbon economy on the bank's strategy and the resiliency of its business model;</li> <li>identifying relevant climate-related risk factors;</li> <li>measuring vulnerability to climate-related risks and estimating exposures and potential losses;</li> <li>diagnosing data and methodological limitations in climate risk management; and</li> <li>informing the adequacy of the bank's risk management framework.</li> </ol>	<p><b><u>Responsibilities of the board and management</u></b> In case climate risks are material, climate change scenario analysis should be embedded in insurers' corporate governance structures, risk management practices, and Own Risk and Solvency Assessments (ORSAs). Insurers should consider:</p> <ol style="list-style-type: none"> <li>the impact of climate risks on their assets and liabilities;</li> <li>the impact of physical and transition risks;</li> <li>the evolution of climate risks under various scenarios, such as multiple carbon emissions and temperature pathways, etc.;</li> <li>the fact that climate risks may not be fully reflected in historical data; and</li> <li>the way climate risks may materialize in the short, medium, and long term.</li> </ol> <p><b><u>Responsibilities of the ERM function</u></b> Insurers' ERM functions must provide identification and measurement of risk for a sufficiently wide range of outcomes, by using techniques aligned to nature, scale, and complexity of the insurer's risks.</p>	<p><b><u>Responsibilities of the board and management</u></b></p> <ul style="list-style-type: none"> <li>✓ Discuss the climate-related scenarios and the associated time horizons.</li> <li>✓ <a href="#">Familiarize oneself with relevant climate risk scenarios developed by the International Energy Agency (IEA) and the Intergovernmental Panel on Climate Change (IPCC).</a></li> <li>✓ Integrate scenario analysis into strategic planning and assign oversight to relevant board committees/sub-committees.</li> <li>✓ Assess materiality of climate-related risks by determining current as well as anticipated organizational exposures to climate-related risks and opportunities.</li> <li>✓ Organizations should identify what scenarios (and narratives) are appropriate, given the exposures and use the results to identify applicable decisions to manage the identified risks and opportunities.</li> </ul>
