

Resiliency reimaged: Resilience as a Service (RaaS)

RaaS is a managed solution to enhance an organization's ability to withstand and rapidly recover from operational disruptions. In an increasingly cyber-dependent world, enhancing operational continuity is critical to building long-term resilience.

RaaS emphasizes a proactive and broad approach to resilience by leveraging integrated technology solutions with Deloitte's Ecosystem and Alliance collaborators. A cohesive relationship between technology and services is foundational to strengthen resilient architecture design, implementation, and execution.

While traditional resilience is siloed across organizations, RaaS centralizes responsibility for protecting critical business operations.

Market drivers and trends

The reality of today's environment

Cyberattacks are more frequent and far-reaching

Threats do not exist in isolation. There is a cyber life cycle challenge affecting many industries.

Legacy resilience is costly and ineffective

Traditional redundancy and replication strategies can inadvertently propagate modern cyber risks rather than mitigate them, highlighting the need for evolving and more secure solutions.

Organizations often struggle to recover critical technologies

Threat actors target critical infrastructure, including backup technologies that are often ill-equipped for consistent data immutability and rapid recovery.

Increased focus on protecting the business is needed

Lack of a business-centered strategy results in deprioritized investments and fewer resources to mitigate threats.

There is a growing pressure to be 'always on'

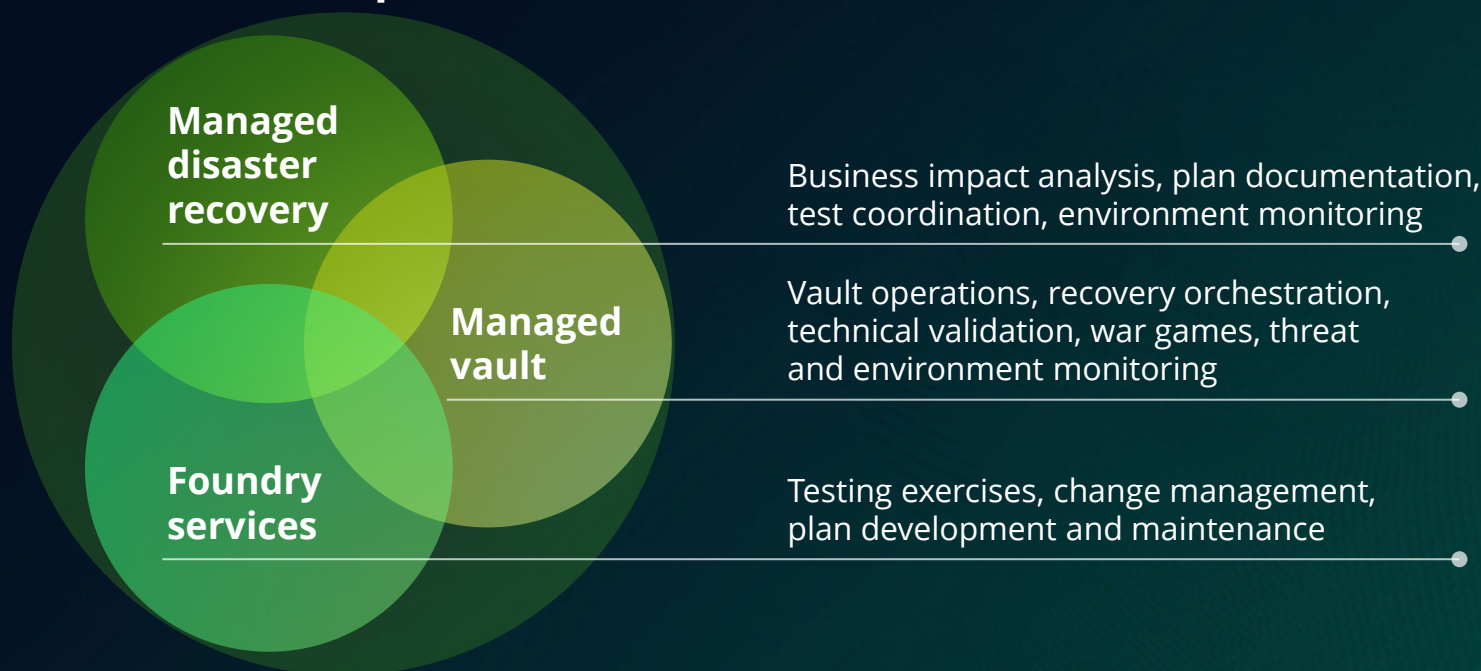

Customers and business partners expect services to be "always on," necessitating organizations to improve cyber resiliency practices and technologies to meet these demands.

Resilience efforts are often siloed and lack accountability

As threats grow in frequency and scope, an organization's ability to prepare, respond, and recover hinges on a shared sense of responsibility.

How we can help

Strengthen continuity with our integrated Resilience services

Operations

Deloitte offers numerous business continuity and disaster recovery planning services, such as recovery strategy development, plan documentation, testing and exercises, and scenario planning, equipping organizations to handle potential disruptions.

Business Impact Analysis (BIA)

Deloitte manages a BIA process using industry-leading change-management tactics to align adjacent recovery designs and plans. We understand an organization's essential services and how they function, based on our extensive experience in business strategy and design.

Third-Party Management

Deloitte identifies critical third parties, designs and implements third-party resiliency strategies, and provides monitoring services to help organizations manage risks and potential threats.

Incident Response

Deloitte leverages its Cyber Incident Readiness, Response, and Recovery (CIR3) methodology to provide organizations with critical assistance through ransomware preparedness, war-game exercises, and the design and implementation of a Cyber Recovery Vault.

Compliance Reporting

Deloitte provides compliance reporting services with detailed risk reporting and monitoring, advanced key performance/risk indicator tracking, and proactive risk sensing to help organizations address regulatory standards.
