Intro to assessing digital maturity and value

In our ongoing research, we explore what types of digital transformations to consider, which technologies to explore, and what returns might be expected. Digital transformation is often quite specific to strategy, sector context, and shareholder expectations -- and this can make it a challenging task. That said, views at a macro scale can help demystify digital transformation by region, by technology, by type of digital transformation.

This piece is meant to shine a light and help you pressure test your digital transformation decisions. Our research provides common criteria for respondents to consider as they assess their digital maturity against global respondents, based on survey data from 1,600 global leaders. The research extends that global assessment frame to six countries: the United States, Canada, the United Kingdom, Germany, France, and Australia, and suggests that each country has its own priorities related to digital spending and capability investments, enterprise value gains, and adoption of value-driving edge strategies like data monetization.

In this analysis, two assessment criteria are used as a proxy for digital maturity

Spend on digital initiatives and digital technology

This first criterion benchmarks 1,600 global responses from leaders across six countries related to spending on digital initiatives and digital technologies. All done against five levels:

- i. digitization of data,
- ii. digitization of platforms,
- iii. using digital strategies to enter new markets,
- iv. using digital strategies to create new products/services, and
- v. using or integrating digital technologies for fundamental change.

The analysis then compares the total responses from each of six countries individually against the baseline of total respondents.

Percentage of enterprise value from digital

This second criterion focuses on how global leaders recognize the value gained from digital transformation. This is measured by the percentage of their overall enterprise value attributed to digital transformation. We benchmark 1,600 global leaders' responses, and compare that to those for each individual country - assuming those attributing a higher percentage of enterprise value to digital transformation are digital maturity leaders.

We also assess technology capability investment value trends by country.

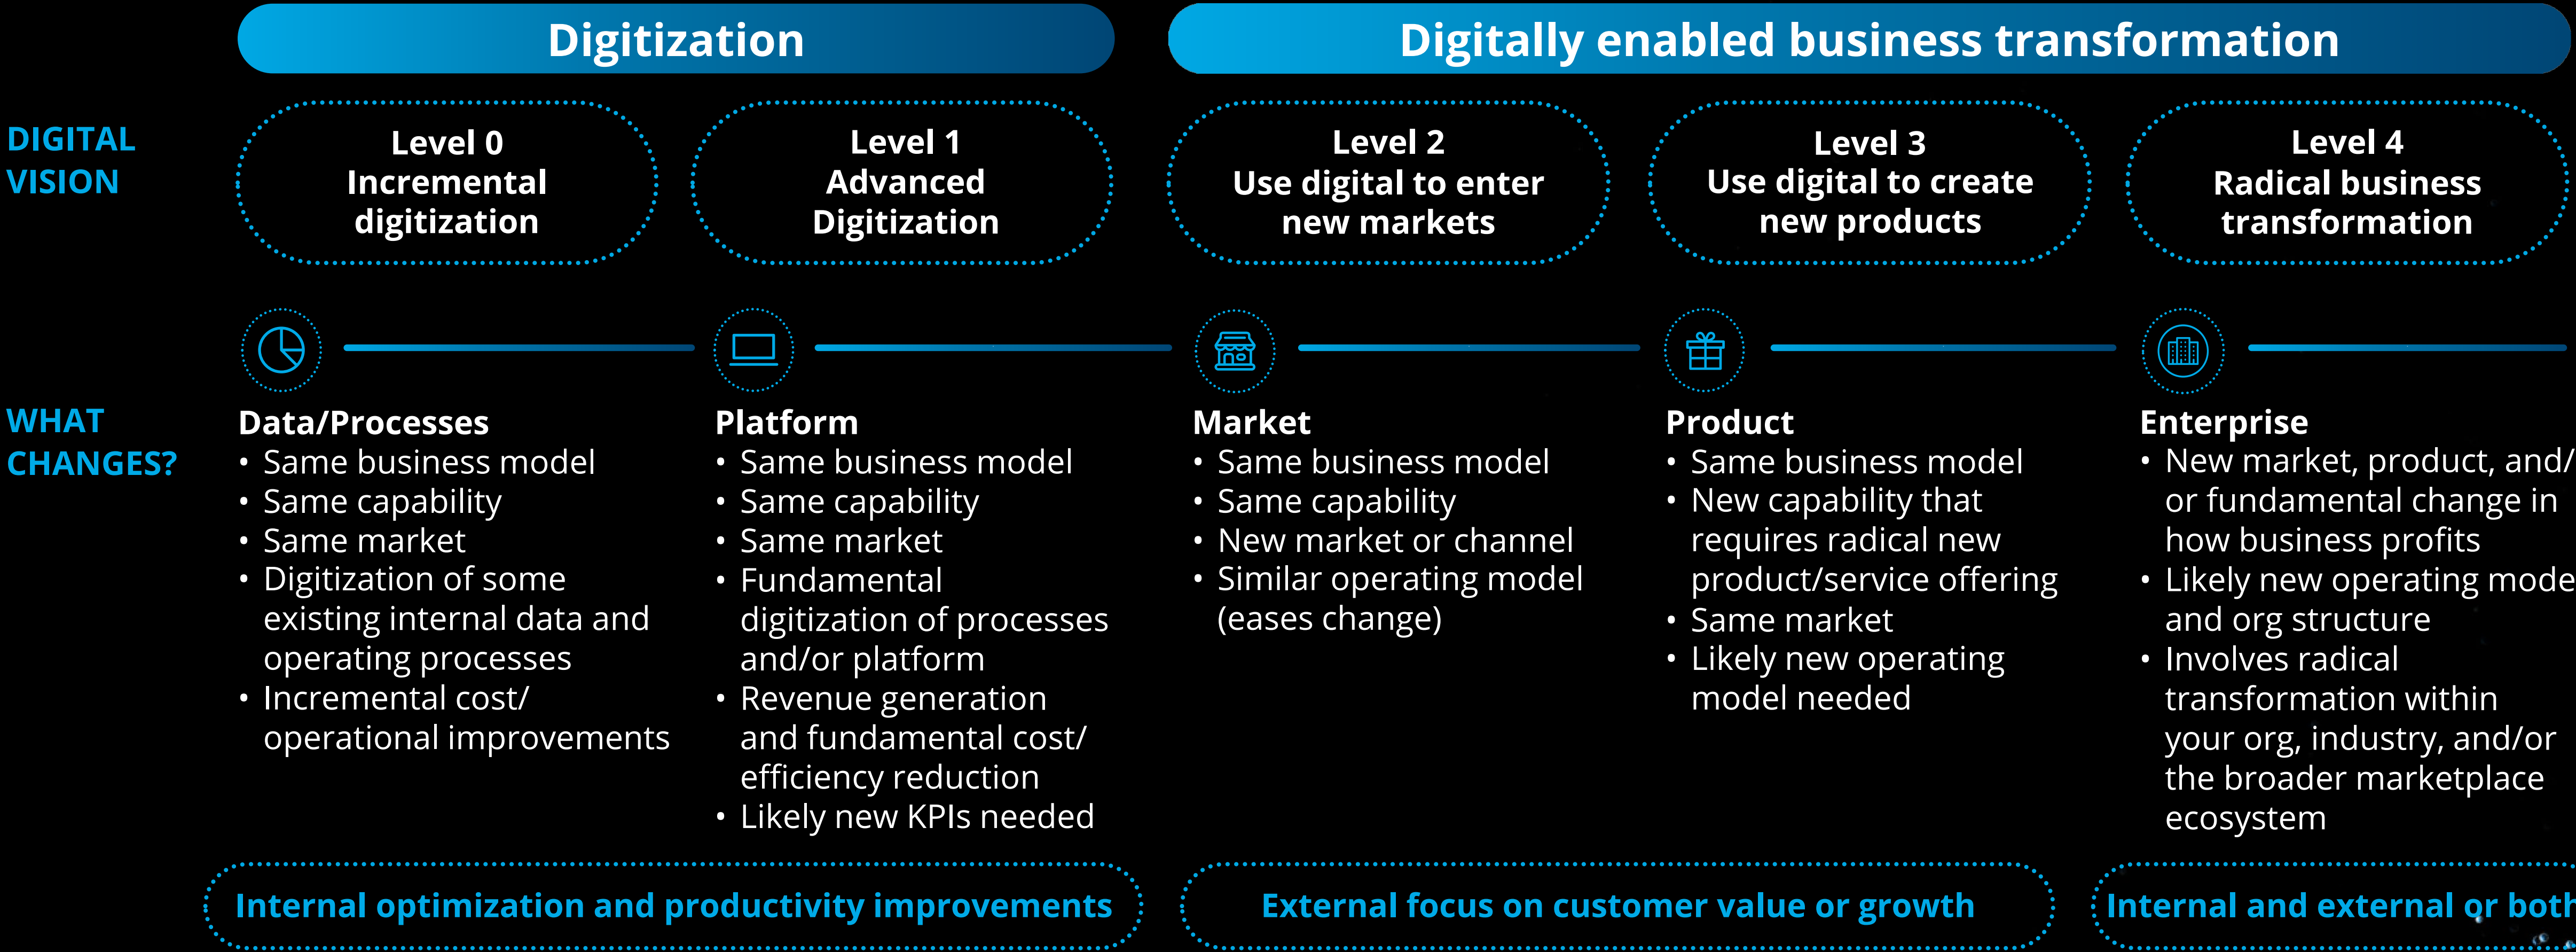

A global view of digital maturity across 1,600 respondents

How enterprises are transforming

Digital transformation ambitions range from modest to fundamental

Source: The framework pertains to a 2022 analysis by Deloitte Global CEO Program and Center for Integrated Research, [How the CEO's leadership in digital transformation can tip the scales toward success](#)

How global respondents are spending

51 percent of global spending on digital initiatives is focused on “using or integrating digital technologies for fundamental change” (Level 4). 32 percent of global respondents attribute medium and high enterprise value to their digital initiatives

Global share of digital technology investments across five levels

% of enterprise value attributed to digital transformation

32%

attribute **Medium and High** (31% or more) value

68%

attribute **Low** (Up to 30%) **value**

- The majority of global respondents spend 51% of their digital technology budget using or integrating digital technologies for fundamental change.
- **71%** of digital technology investments are focused on digitally enabled business transformation: using digital capabilities to enter new markets, create new products/ services, and fundamentally change how the respondents operate. (Levels 2-4)
- 29% of budgets remain focused on “digitization”: modernizing data and platforms. (Levels 0-1)

Based on the analysis, countries that spend less of their budget on Level 4 report that they see a higher share of enterprise value than those spending more. Enterprise value leaders also tend to invest a larger share of their budget in digital tech monetization strategies.

The metrics that matter to respondents

Classic digital transformation measures dominate, with productivity leading the charge. Most global respondents are using annual timelines for assessing their digital transformation value

Global Timeline Value Assessment Horizons

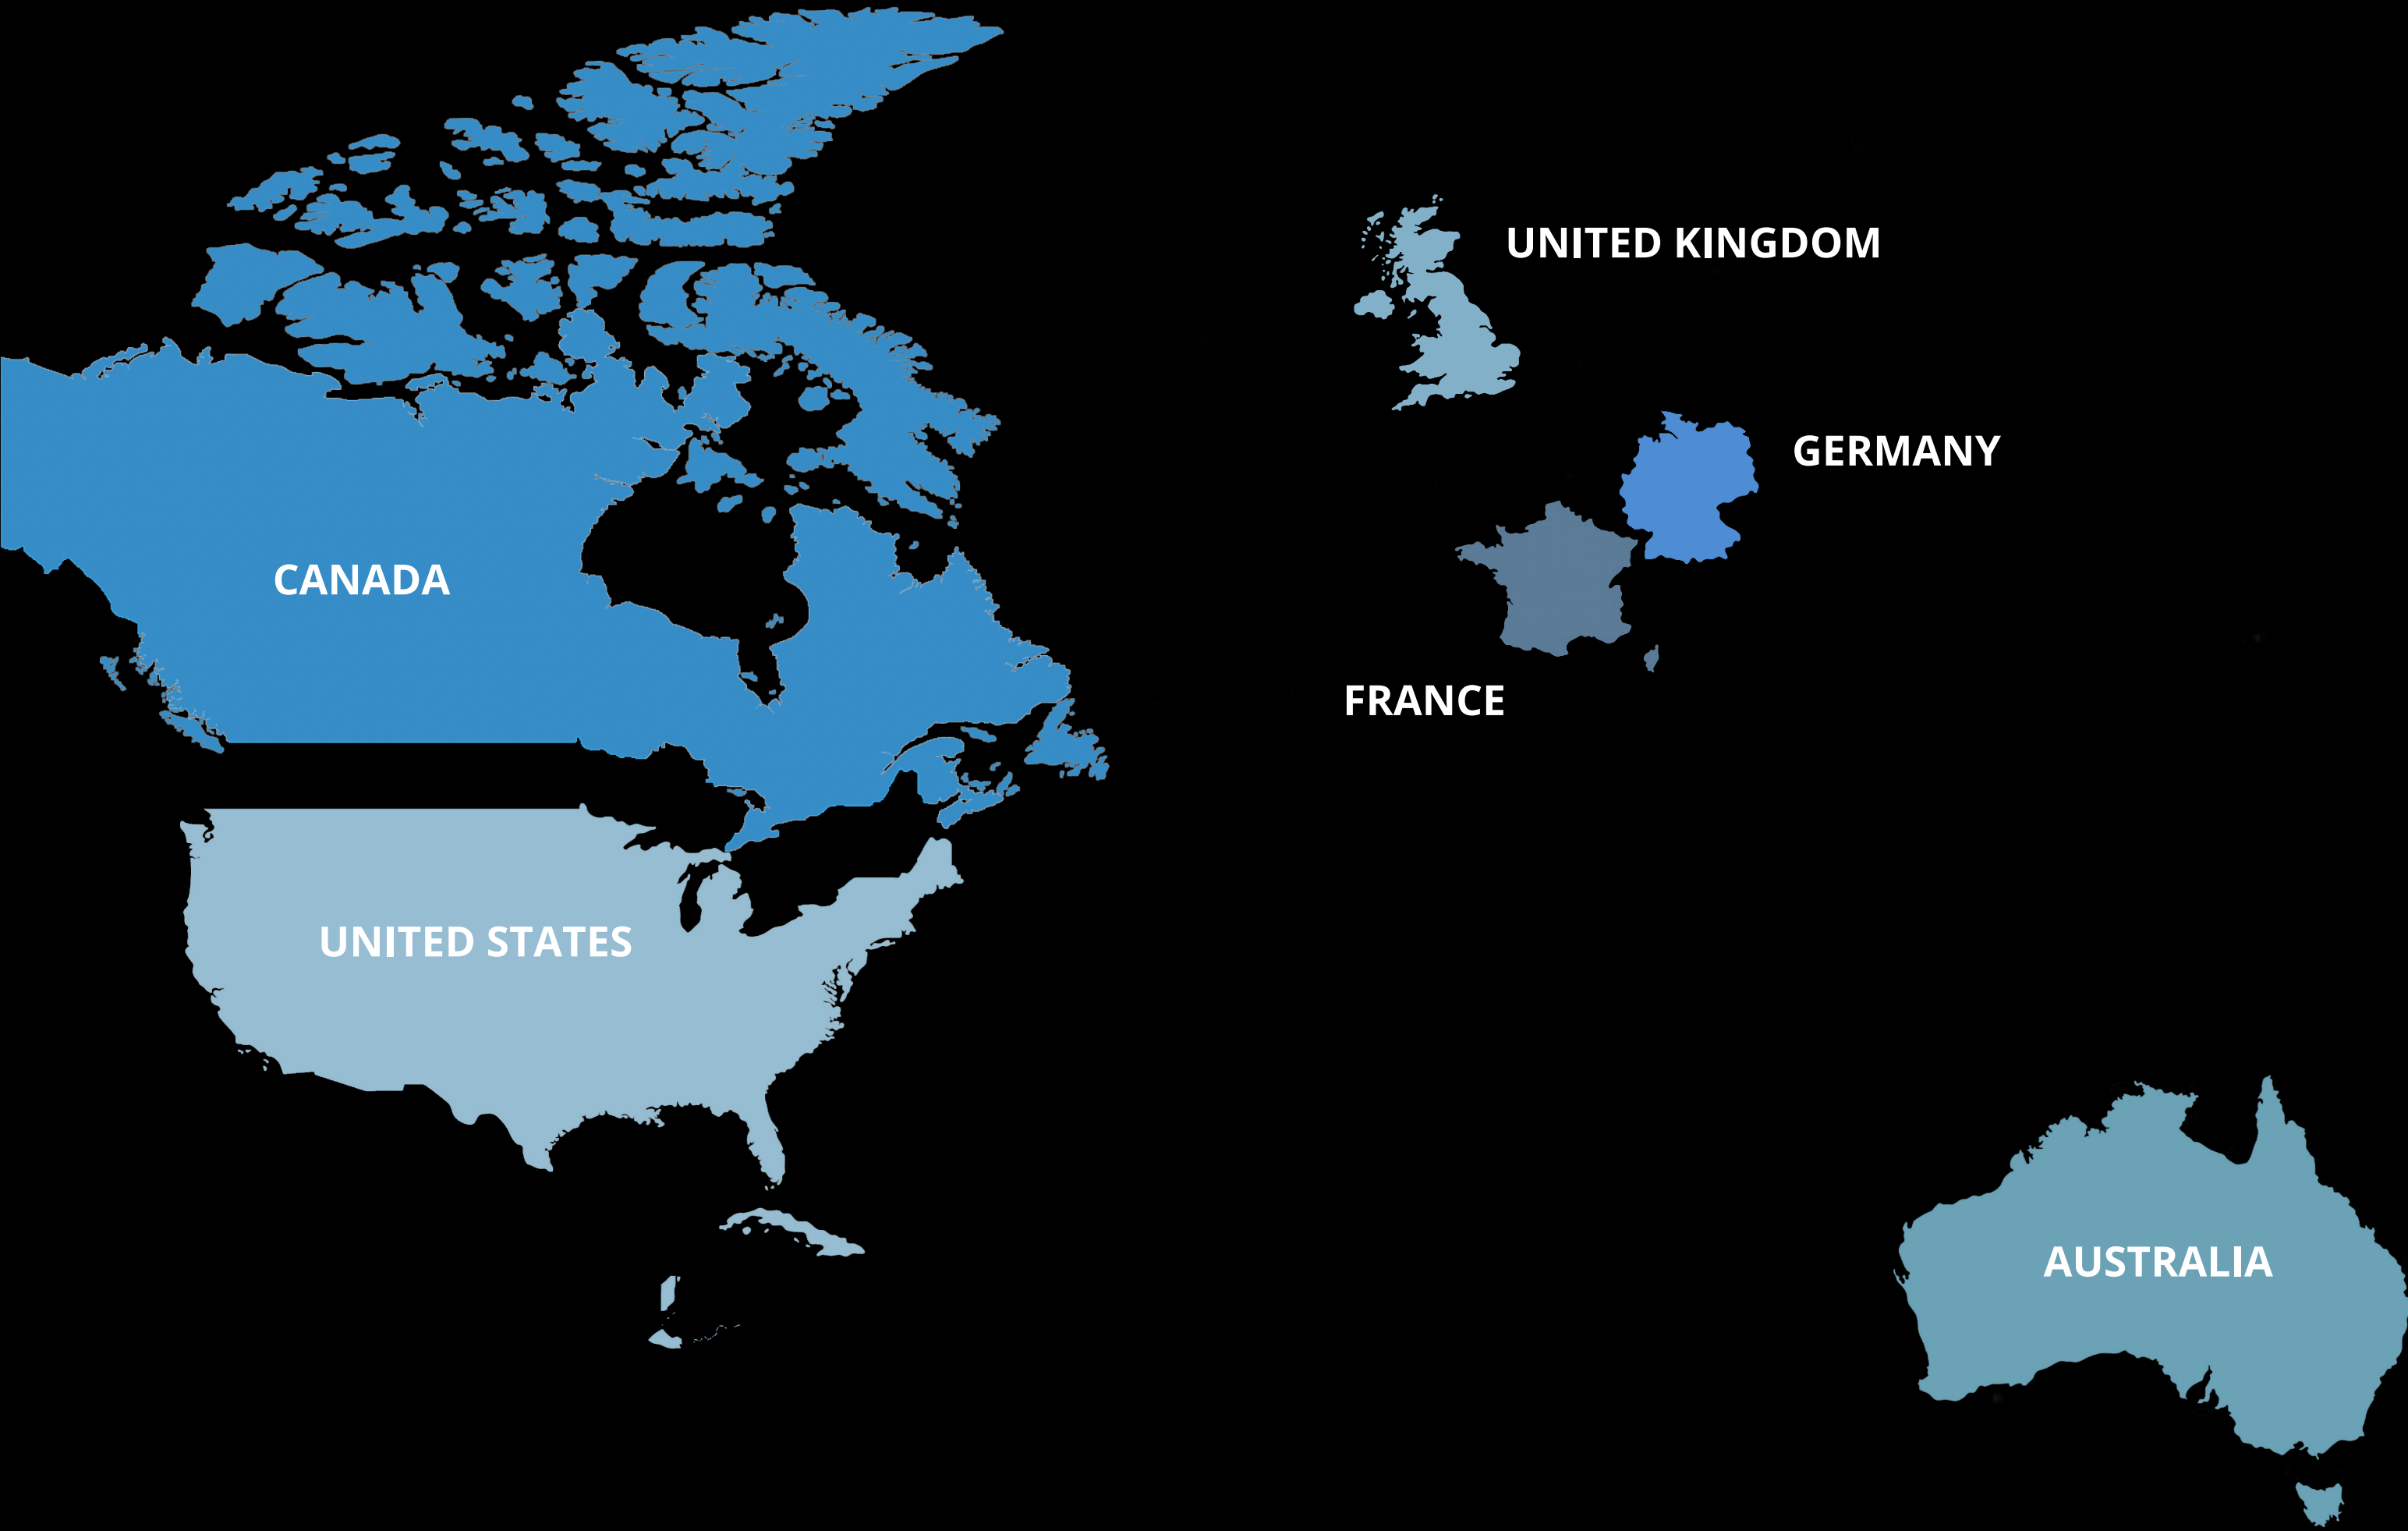

Source: Deloitte Center for Integrated Research survey of global tech value leaders in February 2023

The chief digital officer of a large subsidiary of a multinational food and beverage group elaborates on a staggered value measurement approach:

We have defined a group of three-time horizons, and we allocate our spend with precise portions. We want 60% of the spending to pay off within one year, which we call the 'optimization horizon.' The second horizon is the 'innovation horizon' where we allocate 20% of our budget, and we want this to pay off within three years. The last one is the 'disruption horizon' during which we allow ourselves to conduct some experiments, and we will not ask for outcome details before three years.

----- Global baseline

The United States

n=500

Leaders of US organizations surveyed report that they gain more enterprise value than other respondents globally

7 percentage points below the global baseline for spending on (Level 4) digital initiatives

US respondents, however, have high digital ambitions in their current spending and definition of digital initiatives. US respondents are on par with global tech capability priorities, including:

- Data analytics
- Cloud platforms
- Artificial intelligence (AI) and machine learning

Consider how spending on transformation and technology can advance your strategy.

12% more likely than global respondents to attribute medium to high enterprise value to digital initiatives (31% or more)

US respondents with medium and high enterprise value attributed to their digital transformations are investing less in advanced technologies such as edge computing, federated security, and quantum computing. They could consider assessing if these technologies can enable business capabilities to increase their value gains.

- US respondents are investing more in digital tech monetization versus global organizations. They exceed the global monetization spending baseline by eleven-percentage-points, though their medium and high spending is still low (28%).
- As US respondents direct this spending, they might consider focusing on a single priority strategy to help maximize it or increase spend if ambitions cross multiple strategies; the returns are there. Current top US focus areas include customer personalization strategies via new products or services, becoming a platform business, and selling subscriptions to technology tools and services.
- In general, they are below global overall in the five top KPIs within each of the five KPI categories.
- They are utilizing a quarterly timeline horizon more than global by thirteen-percentage-points.
- Each of the top 10 US KPIs is strongly/very strongly connected with at least three other KPIs.

US organizations report that they gain more enterprise value than other respondents globally

Digital spending and tech capability investments

44% of US spending/investments are focused on Level 4 digital transformation.

US spend on five spectrum levels

- Level 0 - Digitization of Data (23)
- Level 1 - Digitization of Platforms (28)
- Level 2 - Using Digital Strategies to Enter New New Markets (8)
- Level 3 - Using Digital Strategies to Launch New Products/Services (52)
- Level 4 - Using or Integrating Digital Technologies for Fundamental Changes (389)

Canada
n=100

Canadian respondents may need better strategy and implementation approaches

Canadian respondents are on par with global respondents' spending but appear to lag in enterprise value attributed to digital transformation

Canadian respondents are about baseline versus global respondents on spend and lag in enterprise value attribution.

1 percentage point below the global baseline for spending on (Level 4) digital initiatives

- Canadian respondents, however, have moderate digital ambitions based on their current spending and definition of digital initiatives, with priority capabilities including:
- Data analytics
 - Cloud platforms
 - Mobile

Consider how spending on transformation and technology can advance your strategy.

12% less likely than global respondents to attribute medium to high enterprise value to digital initiatives (31% or more)

Canadian respondents with medium and high value attribution report investing less in advanced technologies such as federated security, metaverse, and speech and gesture interfaces. They could consider assessing if these technologies can enable business capabilities to increase their value gains.

Their spending is on par with global baseline budgets related to digital tech monetization with top strategies including leveraging industry convergence trends, repurposing internal data, and customer personalization strategies via new products or services. An increased focus on monetization could help drive value.

Canadian respondents are spending less than the global baseline

Digital spending and tech capability investments
50% of Canadian spending/investments responded that they are focused on Level 4 digital transformation.

Canadian spend on five spectrum levels

United Kingdom

n=150

UK respondents report that they are experiencing high digital value

They report having high digital ambitions; but to maximize digital value, they should consider focusing their spend in the most valuable set of technology capabilities and monetization strategies

We found that UK respondents spend more on Level 4 change and report more value

7 percentage points below the global baseline for spending on (Level 4) digital initiatives

UK organizations, however, have high digital ambitions based on their current spending and definition of digital initiatives. Priority capability investments include:

- Data analytics
- Cloud platforms
- Artificial intelligence (AI) and machine learning

Consider how spending on transformation and technology can advance your strategy.

8% more likely than global respondents to attribute medium to high enterprise value to digital initiatives (31% or more)

UK respondents with medium and high value attribution are investing less in advanced technologies such as federated security, metaverse, and quantum computing. They could consider assessing if these technologies can enable business capabilities to increase their value gains.

Although UK respondents are three-percentage-points more likely to invest in digital tech monetization than the global baseline of respondents, their medium and high spending is still low (20%). As UK respondents direct this spending, they might consider focusing on a single priority strategy to help maximize it or increase spend if ambitions cross multiple strategies, and the returns are there. Top priorities in the region for those surveyed include becoming a platform business, selling subscriptions to technology tools and services, and leveraging convergence trends.

UK organizations surpass the global baseline in value generation via monetization

UK respondents have digital tech monetization spend above the global baseline and high enterprise value attributed to digital transformation

Digital spending and tech capability investments

44% of UK spending/investments are focused on Level 4 digital transformation.

UK spend on five spectrum levels

Germany
n=150

Leaders of German organizations surveyed lag others on enterprise value attributed to digital investments

German respondents are on par for spend but lagging for value

German respondents are spending on par with others but reporting less value.

1 percentage point above the global baseline spend on (Level 4)

German organizations, however, have a more ambitious definition of digital transformation than this spend reflects. Top capability investments include:

- Data analytics
- Mobile
- Internet of Things (IoT)

Consider how spending on transformation and technology can advance your strategy.

8% less likely than global respondents to attribute medium/high (31% or more) enterprise value to their digital transformation

German respondents with medium and high enterprise value attributed to their digital transformations are investing less in advanced technologies such as federated security, speech and gesture interfaces, and cryptography. They could consider assessing if these technologies can enable business capabilities to increase their value gains.

German respondents appear to be in a lagging position regarding digital tech monetization by nine-percentage-points compared to the baseline global respondents. They might consider increasing their investment to help benefit from the potential of capturing additional value. Given investments in digital transformation are above the global baseline, this may be a matter of reallocating existing funds to becoming a platform business, joint ventures with academic institutions, and online communities.

German respondents report less enterprise value from digital initiatives versus others

They also spend less of their budget on digital tech monetization than others

Digital spending and tech capability investments

52% of German spending/investments are focused on Level 4 digital transformation.

France
n=100

French organizations surveyed are more likely to spend on Level 4 change

However, they're below the global average for enterprise value attributed to digital initiatives

8% more likely to spend on (Level 4)

French organizations, however, have higher digital ambitions than this spend may reflect. Top capability investments include:

- Data analytics
- Cloud platforms
- Mobile

Consider how spending on transformation and technology can advance your strategy.

10% below global respondents that attribute medium to high enterprise value to digital initiatives (31% or more); French respondents are mostly above the global baseline in tech capabilities.

French organizations, however, with medium and high value attribution are investing less in advanced technologies such as quantum computing, metaverse, speech and gesture interfaces, and federated security. They could consider assessing if these technologies can enable business capabilities to increase their value gains.

French respondents appear to be in a lagging position regarding spending on digital tech monetization by eight-percentage-points compared to the baseline global respondents. While their investments in digital transformation appear to be in a progressive state, they might consider increasing their allocation to monetization, so that they can augment the value that is attributed to digital transformation. Some strategies include customer personalization strategies via new products or services, becoming a platform business, and a venture arm to test new business models.

French organizations surveyed are spending more than others

However, they appear to lag in enterprise value attributed to digital initiatives

Digital spending and tech capability investments

Methodology

*We analyzed the total responses of the global survey, which included **1,600 respondents across industries**, organizational types, and organizational sizes. Global baselines represent the respondent totals from the full survey.*

The six countries in this analysis—**United States, United Kingdom, Canada, France, Germany, and Australia**—were selected based on a statistically significant sample size of 100+ respondents in each country, individually satisfying three sampling criteria:

Representing a diverse mix of respondents across industries (TMT, Consumer, FSI, LSHC)

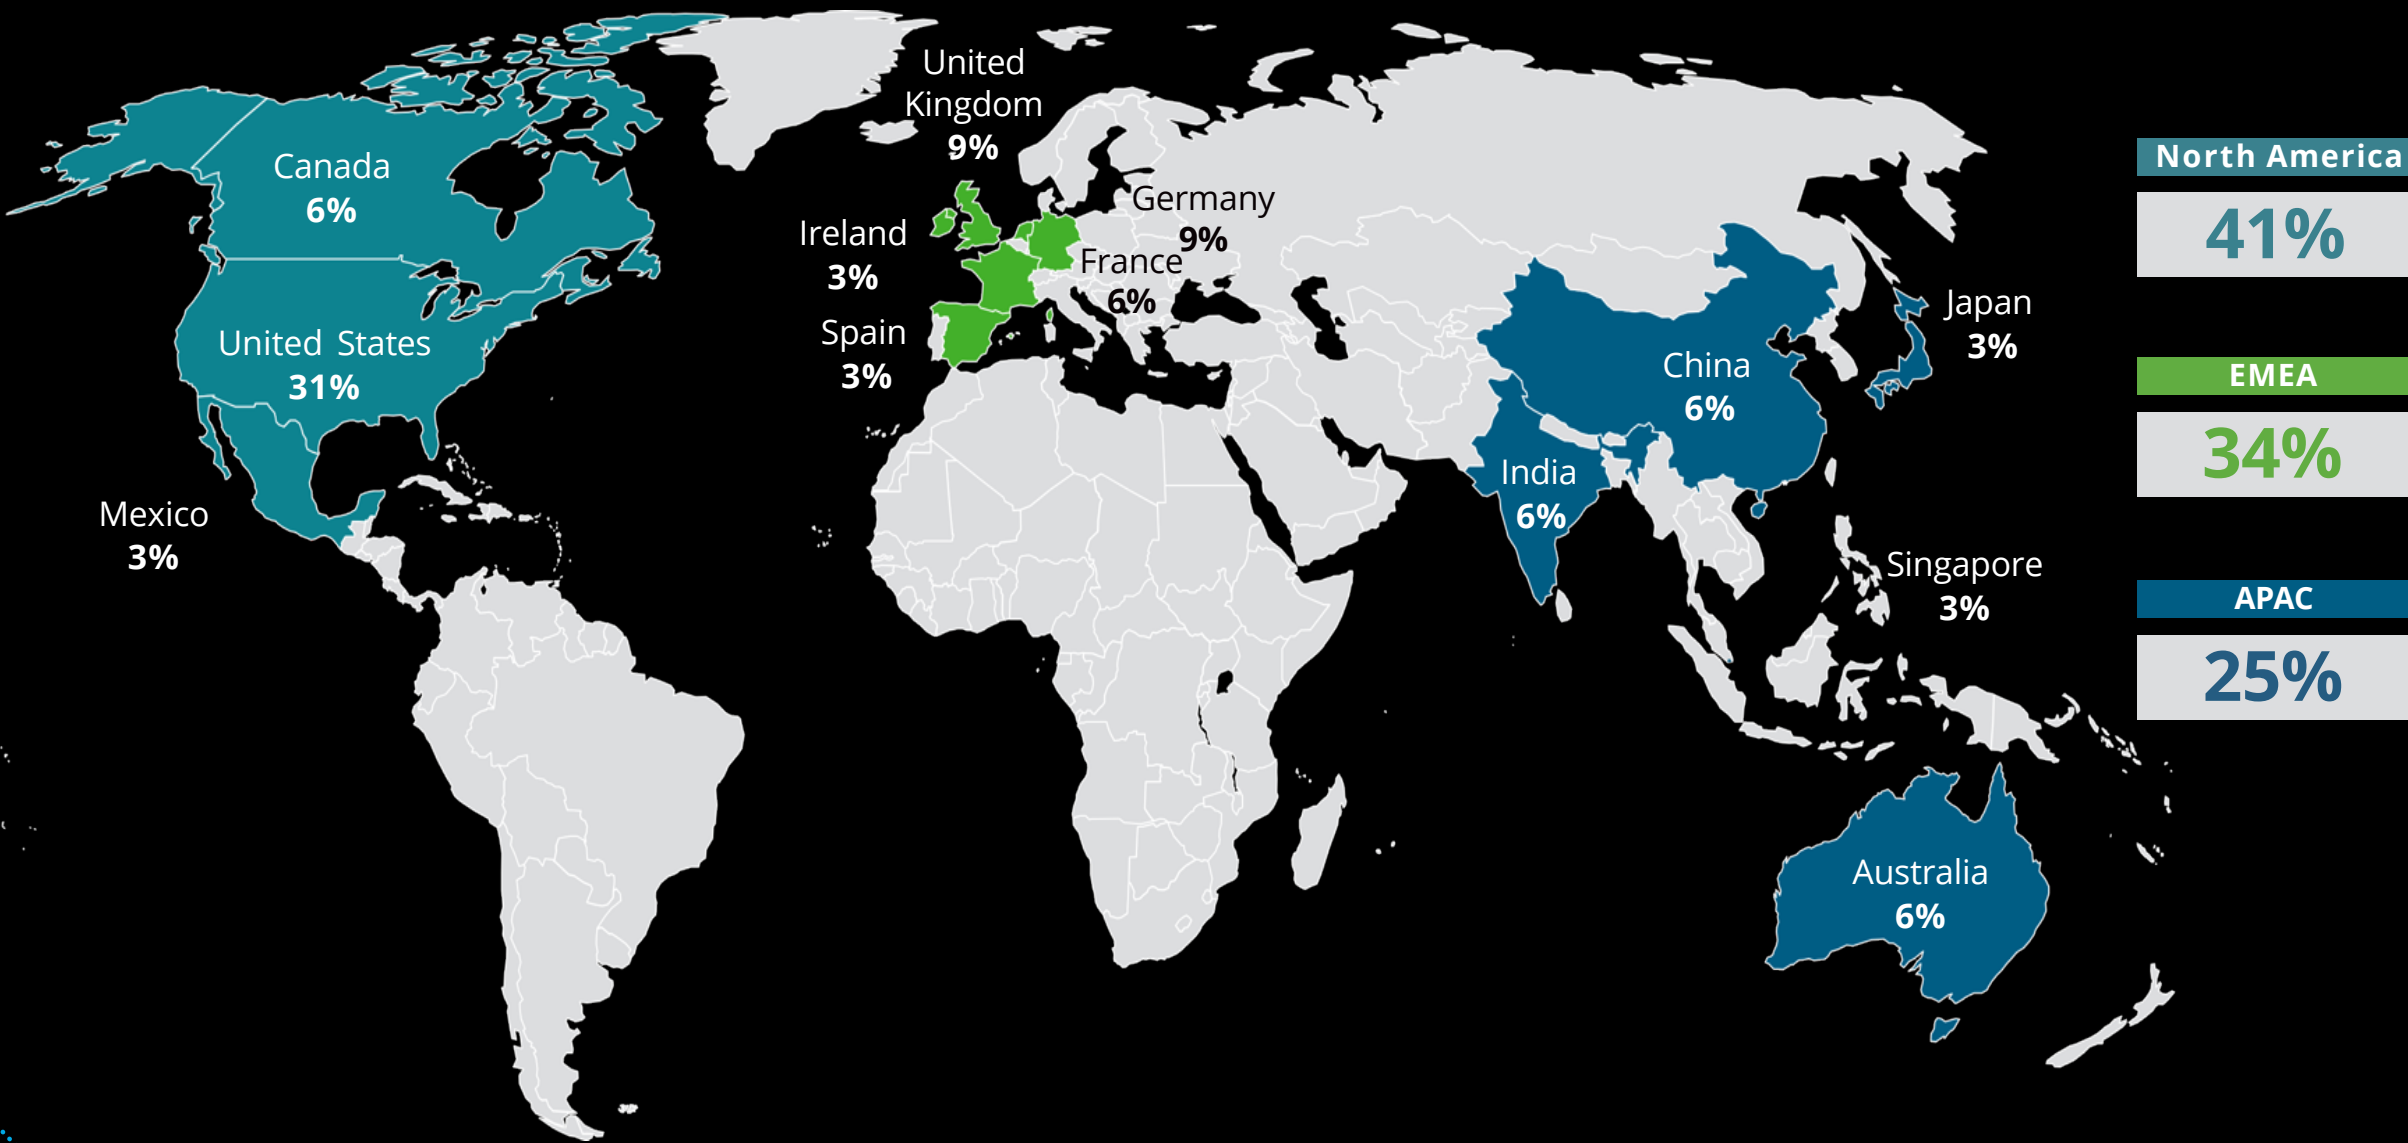

Representing different types of organizational structures (public, for-profit; private, for-profit; public/government entity)

Representing respondents of all sizes (annual revenues of less than \$100M to \$100B+)

Sector and industry

Ownership structure

Annual revenue

Role or level

Job function

Industry experience (years)

Involvement in digital transformation decision-making

- I influence decision-making but am not part of the decision-making team
- I am part of a team that makes these decisions
- I am the final decision-maker

Contacts and Acknowledgements

The authors would like to thank **Ari Ginsberg, PhD.** Professor of Entrepreneurship and Management at New York University Leonard N. Stern School of Business; **Iram Parveen** and **Saurabh Bansode** from the Deloitte Center for Integrated Research; and David Levin, PhD. from the **Deloitte Data Sciences and Survey Advisory team (DSAS)** team. This research would not have been possible without your contributions to the survey design and global interviews used for this analysis. Thanks also to the 10 C-suite leaders who gave their time and expertise to be interviewed across this research series.

The authors would also like to thank **Brenna Sniderman, Andrew Ashenfelter, Ireen Jose, Rod Sides, Saurabh Bansode, Saurabh Rijhwani,** and **Siri Anderson** for their partnership, expertise, and support throughout this project.

Also, a special thanks to **Dr. Ronnie Sadka**, senior associate dean for faculty, chairperson and professor of finance, and the Haub Family professor at the Carroll School of Management at Boston College, as well as **Gideon Ozik**, faculty professor, of Risk Institute research associate at the EDHEC Business School on the Academic Advisory Board for their inputs throughout this project.

About Deloitte

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited, a UK private company limited by guarantee (“DTTL”), its network of member firms, and their related entities. DTTL and each of its member firms are legally separate and independent entities. DTTL (also referred to as “Deloitte Global”) does not provide services to clients. In the United States, Deloitte refers to one or more of the US member firms of DTTL, their related entities that operate using the “Deloitte” name in the United States and their respective affiliates. Certain services may not be available to attest clients under the rules and regulations of public accounting. Please see www.deloitte.com/about to learn more about our global network of member firms.
